# 2022 Report to the Plenary

## Handicap Committee Report

The handicap committee does not see the need to change anything in SC3AH at this time (current version SC3AH\_2021a, April 15, 2021)

As a result of the modification of the IGC club class handicap list some years back, there is a clear move to fly less old gliders and in addition more flapped gliders in international championships. In this respect, the handicap committee is watching the trend closely in order to avoid unfairness in competitiveness between the various gliders. As we all know, there will always be some advantage for the one or the other type of glider which also comes with the very different thermal conditions in very different regions. As the IGC club class handicap list offers a wide range of different types of gliders that have been built in relatively large numbers (not all types the same), pilots have the possibility to choose and thereby minimizing any disadvantage for themselves.

In terms of the IGC handicap list for the 20m multiseater class, there is nothing to report to date.

Thanks to the members of the IGC Handicap Committee for their expertise and valuable support whenever a topic comes out.
