FAI IT Expert Group
Report to the 108ᵗʰ FAI General Conference
Pattaya, 17-18 October 2014

Reported by : *Visa-Matti Leinikki,, Point of Contact (PoC)*

Currently the internal work on FAI IT is focused on the database development for the Sporting License database and the Office database. The databases are scheduled to go live in Q4/2014.

The task of the IT EG was to define and plan data access methods to access information in these two main databases. These methods should include standard interfaces (SOAP, WebDav etc.) and user rights management and rules for these interfaces. When the work on the databases is finished, this process can be started. Database structures and other details will then be given to the group members on separate documentation.

So until further notice there is no action necessary for the IT Expert Group.
