RIGHTS TO FAI INTERNATIONAL SPORTING EVENTS

All international sporting events organised wholly or partly under the rules of the Fédération Aéronautique Internationale (FAI) Sporting Code¹ are termed *FAI International Sporting Events*². Under the FAI Statutes³, FAI owns and controls all rights relating to FAI International Sporting Events. FAI Members⁴ shall, within their national territories⁵, enforce FAI ownership of FAI International Sporting Events and require them to be registered in the FAI Sporting Calendar⁶.

An event organiser who wishes to exploit rights to any commercial activity at such events shall seek prior agreement with FAI. The rights owned by FAI which may, by agreement, be transferred to event organisers include, but are not limited to advertising at or for FAI events, use of the event name or logo for merchandising purposes and use of any sound, image, program and/or data, whether recorded electronically or otherwise or transmitted in real time. This includes specifically all rights to the use of any material, electronic or other, including software, that forms part of any method or system for judging, scoring, performance evaluation or information utilised in any FAI International Sporting Event⁷.

Each FAI Air Sport Commission⁸ may negotiate agreements, with FAI Members or other entities authorised by the appropriate FAI Member, for the transfer of all or parts of the rights to any FAI International Sporting Event (except World Air Games events⁹) in the discipline¹⁰, for which it is responsible¹¹ or waive the rights. Any such agreement or waiver, after approval by the appropriate Air Sport Commission President, shall be signed by FAI Officers¹².

Any person or legal entity that accepts responsibility for organising an FAI Sporting Event, whether or not by written agreement, in doing so also accepts the proprietary rights of FAI as stated above. Where no transfer of rights has been agreed in writing, FAI shall retain all rights to the event. Regardless of any agreement or transfer of rights, FAI shall have, free of charge for its own archival and/or promotional use, full access to any sound and/or visual images of any FAI Sporting Event. The FAI also reserves the right to arrange at its own expense for any and all parts of any event to be recorded.

1 FAI Statutes, Chapter 1, para. 1.6
2 FAI Sporting Code, Gen. Section, Chapter 4, para 4.1.2
3 FAI Statutes, Chapter 1, para 1.8.1
4 FAI Statutes, Chapter 2, para 2.1.1; 2.4.2; 2.5.2 and 2.7.2
5 FAI By-Laws, Chapter 1, para 1.2.1
6 FAI Statutes, Chapter 2, para 2.4.2.2.5
7 FAI By-Laws, Chapter 1, paras 1.2.2 to 1.2.5
8 FAI Statutes, Chapter 5, paras 5.1.1, 5.2, 5.2.3 and 5.2.3.3
9 FAI Sporting Code, Gen. Section, Chapter 4, para 4.1.5
10 FAI Sporting Code, Gen. Section, Chapter 2, para 2.2.
11 FAI Statutes, Chapter 5, para 5.2.3.3.7
12 FAI Statutes, Chapter 6, para 6.1.2.1.3

Editors Note:

This version of the WPRS formula was accepted at the CIVL Plenary meeting in Austria 2009 and corrected in April 2018 with all the decisions taken in 2009 - 2018.

The formula is used for all disciplines in both Hang gliding and Paragliding.

There are some differences between classes, like minimum number of tasks and competitors and number of tasks required for full value of the competition.

The main aim of the WPRS is to rank pilots around the world in a fair manner, so the rankings will show the strength of each individual pilot, based on the competitions in which they have participated.

This version of the formula took effect from March 1st 2009. All rankings from that date use the new formulas and show the competitions in the last 3 years recalculated using the new formula.

Older rankings are unchanged in the WPRS system.

The pilot (participant) points are based on the sum of 4 best competitions in the last 3 years with time devaluation (Td) as it has been. Time devaluation is important in the formula because the value of the competition should decrease over time, otherwise we would have an "all time best in last 3 years" ranking instead of a current ranking.

The rankings are for each class and discipline of hang- and paraglider competitions.

A pilot can be ranked in any of the rankings based on his participation in sanctioned competitions.

On following pages, the formula is described in detail.

1 More detailed explanation of the WPRS formula

Factors to consider:

1. Position ranking (**Pp**):

The value of a participant's effort in a competition relative to the other participants in the same competition. This is calculated from the actual total scores from the competition (GAP or other scoring formula)

2. Competition ranking (**Pq, Pn, Ta**):

The value of the competition relative to other competitions in the same ranking (using the competitions in the last ranking prior to the competition as benchmark). **It is obligatory to use GAP scoring formula for Hang gliding XC because it is required for Ta calculation.**

3. Time devaluation (**Td**):

The value of the competition should decrease over time, otherwise we would have a "all time best" ranking instead of a current ranking.

4. The number of results that should count for a participant in the ranking. It is sum of the points of 4 best competitions in the last 3 years.

2 The actual WPRS formula:

$$WPR = Pp * Pq * Pn * Ta * Td$$

To make the points more readable it is multiplied by 100 and round to 1 decimal.

$$WPR = \text{round}(Pp * Pq * Pn * Ta * Td * 100, 1)$$

The participant's place in a given ranking (at a ranking date) is decided by the sum of the top 4 results in the last 3 years.

The **competition ranking factor** is based on **real differences** in the number of top-ranked pilots participating and the number of pilots participating in the competition relative to the number of pilots in the ranking and in the average competition for the given ranking.

2.1 Pilot Points (**Pp**)

The value of a person's effort in a competition relative to the other participants is calculated as a curve.

The curve is using the Pq so in competition with high ranked pilots the curve is fairly steep, but in competitions with lower ranked pilots it gets close to be straight line.

Pq has the value of 0.2 to 1.0 based on the rankings of the pilots in the competition.

As the formula uses Pq as power creating a curve and Pq varies, the curve varies.

So the formula use the maximum value comparing the value based on the actual Pq and if this was the highest valued competition with Pq = 1.0.

$$Pp = \max(P_{\text{placing}}^{1+Pq}, P_{\text{placing}}^2)$$

where Pplacing is (last place - pilot place+1)/ last place

2.2 Competition ranking (P_q , P_n , T_a)

In a perfect competition with all the top pilots participating the competition ranking should be 1.0. So, what to do with all those other competitions? Winning a competition with only beginner pilots or a competition with only one participant should give a competition ranking close to 0.0.

We use three factors in the WPRS formula to measure the value of a competition:

1. The quality of the participants (P_q).
2. The number of participants compared to other competitions in same ranking (P_n).
3. The success of the competition (T_a).

$$P_q * P_n * T_a$$

2.3 Participant quality (P_q)

Presumption: A competition with maximum quality of participants would be a competition where all the top ranked pilots participated.

To find P_q we use the last ranking prior to the competition and find the sum of ranking-points for the top 1/2 ranked pilots that are entered in the competition. Then we find the sum of ranking-points as if those pilots would have been the top ranked pilots of the world. This gives us 1.0 if the top ranked pilots had actually entered and 0.0 if no ranked pilots are entered.

To avoid $P_q = 0$ for comps with no ranked pilots set a lower limit of 0.2.

$$P_q = P_{q_srp} / P_{q_srtp} * (1 - P_{q_min}) + P_{q_min}$$

P_{q_srp} = "sum ranking-points of the top 1/2 ranked participants"

P_{q_srtp} = "sum ranking-points if they had been the top-ranked pilots of the world"

P_{q_min} = "minimum P_q "

Virtually no competition will get $P_q = 1.0$. Top competitions may get between 0.7 and 0.8 and there will be a difference between these.

2.4 Number of participants (P_n)

$$P_n = \text{square root} (\text{"number of participants"} / \text{"avg. number of participants in competitions last 12 months"})$$

if ($P_n > P_{n_max}$) $P_n = P_{n_max}$

$P_{n_max} = 1.2$, saying that a competition with slightly more than average number of participants is a good benchmark.

Looking at WPRS data on 01.01.2007 the average number of pilots in PG XC competitions is 69 pilots.

In HG class 1 the average number of pilots in competitions at that date is 43 pilots.

This formula handles the issue of P_n on the average in competitions for each discipline. It will also take into account change of average number of participants in competitions, like increasing interest in Paragliding Accuracy and Paragliding Aerobatics. For aerobatics the number of pilots is based on the average number of pilots in syncro and solo as if it is separate competitions.

No formula change is needed if the average numbers of pilots change in the next years.

2.5 Success (Ta)

One last thing one may consider is the success of the competition (**Ta**), i.e. was it a fair competition. There are many ways to measure this, none is very objective or accurate. As competitions in paragliding mostly involve a number of tasks we tend to use this as a measure of success.

Ta values for Paragliding XC, Accuracy, Aerobatics:

1 task: 0.5
 2 tasks: 0.8
 3 tasks: 1.0

Application of this coefficient means that a Paragliding competition has full value if there are 3 valid tasks, but a Hang gliding competition has only full value if there are 6 or more tasks.

For hang gliding, it is recognised that competition success is not dependent solely on the number of tasks, but rather on the sum of the quality of all tasks (TQ or 'total quality').

So, **Ta** is expressed as a function of TQ:

$Ta = 1 - 138,4477 * 10^{-12} * (4000 - TQ^2,736966)$ for $TQ \leq 4000$ and 1 for $TQ > 4000$

0	0,0%
500	22,8%
1000	42,7%
1500	59,7%
2000	73,8%
2500	85,0%
3000	93,2%
3500	98,2%
4000	100,0%
4500	100,0%

The only consistent way we currently have to assess task quality, is the number of points available for a task, calculated by the GAP formula, therefore Cat 1 & Cat2 competitions are now required to use GAP if they intend to be listed in WPRS.

Thus, TQ is calculated as the sum of the number of available points calculated by GAP, over all tasks.

To ensure that the task qualities calculated by GAP are meaningful, the scoring software that uses GAP must be configured to use at least 1 hour for the nominal time parameter.

2.6 *Time devaluation (Td)*

$$Td = 1 / (1 + Td_a^{(DaysSinceEndOfComp / 1096 * Td_b - Td_b / 2)})$$

This gives an s-curve with X in the range 0 to 1096 (days or 3 years) and Y going from 1.0 to 0.0.

Td_a = 2, **Td_b** = 20 (changing these will change shape of the s-curve).
