

## **Report from Scoring Software Working Group**

IGC Plenary, February 27, 2015

It was another quiet year for the SSWG. No major scoring problems or discrepancies were reported to the WG in 2014. This can largely be attributed to the excellent cooperation of the software vendors and our hardworking Scorers.

Looking ahead, these projects have been mentioned and merit further discussion:

- Version control for scoring programs.
- A specification of a standard format log file, to be produced by the scoring program. The file would contain intermediate results that could be checked either by inspection or by a generic evaluation program that would remain under the control of IGC.
- The generic evaluation program itself.
- A standard format for the specification of Tasks.
- Web-based scoring.
- Unofficial real-time scoring based on tracking data

The WG welcomes the Delegates' opinions on these (and any other) scoring topics.
