# SSWG Report to the IGC Plenary 2019

## Activities of SSWG in year 2018

In terms of activity this year 2018 was very light, we worked on the proposal for a protocol and data interchange format, between the data gathering programs (aka OGN) and the scoring software programs (aka SeeYou or Strepla), with the goal in mind of to have ready some real time scoring program to be used on IGC competitions.

So we wrote a “white paper” with the proposal, documented the protocol and the data interchange formats in detail and we circulated within the main software writers, asking for their feedback.

Still we are in this slow process of the review.

In the meantime we are monitoring the progress of the development of the OGN/IGC trackers as the source of data for the real time scoring, the development looks promising.

Those OGN/IGC tracker devices will contain the elements, that will make the real time scoring secure and robust, in such a way, that it will allow to the authorized web applications to show the progress of the competitions, to have a real time scoring and under the control of the competition organizers, making the watch of the competition on the internet a much more pleasant experience.
