Proposal from Germany

Club Class

Sc3a, Appendix 3, Club Class handicap list.

**Min. handicap in club class should be limited to 0,98**

Reason: Taday’s handicap list features its minimum at 0,98 and the maximum at 1,09. Whereas 1,09 is defined as the maximum of today’s handicap list. The lower end of 0,98 is not defined as a minimum. The range of handicap should be restricted for a sensible task setting. And it should be avoided to start handicapping of lower performance gliders with missing or non-verified data.
