

Change in the definition of the 13,5M class

6.5.6 13.5 metre Class

- a. WINGS The span must not exceed 13,500 mm.
- b. BALLAST Disposable ballast is permitted.
- c. WING LOADING Wing loading shall not exceed 35 kg/m².

Note: 13.5 metre Class championships will begin in 2015.

Proposal :

Addition of : " SCORING Championship scoring formulas shall include handicap factors"

Argumentation :

- The use of handicaps will reduce the global cost of the creation of this new class
- There are a lot of PW5 in the world. As 13,5M class is replacing the world class, this new class must include the use of handicaps to give a chance to the PW5 to compete in this class without any disadvantage.
