

## CIAM Education S/C report 2019

The Education SC has been in contact via E-mail during the year discussing some matters described here.

We discussed the amount of the scholarship. It's in our opinion time to increase the amount. We stayed now many years with 2000 Euro. Inflation and the change of value of money could indicate that it is time to increase the scholarship some to keep the same status as when the scholarship was first stated. We decided to make a proposal to increase the amount to 2500 Euro for coming years.

We also discussed to make some more detailed instructions for the Scholarship Evaluation experts. The discussion has been going in the direction that we finally decided that it is better to keep the instruction as it is, quite open.

We continued our discussion about how to promote "Good examples with the work with juniors". How to make them visible, we talked about posting them on some spot at the CIAM web page. We have been in contact with the FAI office and we got some positive response. We can now write articles and send in for posting on the web page and we also got promise from the office that they will help us to promote our CIAM Education FB group that we created.

Our FB Group has been generating some new post of good examples how to use aviation in education.

We had some further discussions about how we can contribute in the next WAG in Turkey. Some interesting ideas have come up during the discussions, promotion events with simple electric gliders is one of the ideas.

I have been working with the scholarship program during the year. Coordination with the evaluation experts and collecting the evaluation experts votes for the scholarship. A big work is to try to open NAC's eyes that the scholarship exists. I try to promote it via social media, FB is one of the places.
