Me and my passion

When I was in the first class of primary school, I started participating in modelling classes held in my school. Then I build my first flying model and ~~begin~~ began learning about aerodynamics and how to build flying models. However, after 4 years attending the workshops, our modeling classes were liquidated.

Afterward, I met a man who created a new modeling club. He asked me if I wanted to take part in a space models competition. I accepted his offer and it was the beginning of my participation in this type of competitions.

After my second competition, I joined the Polish national team. As a result, I started preparing for the 2015 European Championships in Lviv, Ukraine.

There, in fact, I won second place in s7 category although it was my first start in a contest like that.

After that, I made a lot of progress, so my performance enhanced and I achieved high results.

The next year I won the s7 Polish Championships and I know I would participate in the 2016 World Championships which proved to be my great success as I ~~was~~ became the World champion in s7.

My results in 2017 are the first place in s7 and the first place in s1a categories during the European Championships for space models ~~and three gold medals in Polish Championships, s5b, s7a, s1a categories.~~ and the first place in s7 and s5b in Polish Championships.

At 2018 I sustain the 5th junior world champion title
of the 2018 World Championships for space models
and three gold medals in Polish Championships, 5th, 5th & 5th for.
My latest achievements are sustaining of the 5th junior
European Championships in Burgau, I won 3rd junior category
at Polish Championships and 3rd place of F3p after Polish Championships.
I have been starting in F3k to, and planning to start
in F5^B category next year.

I think aero modelling and space modelling
are the best way of expressing what I love doing.
Therefore, I will definitely take part in the next competitions
in aero and space modelling, which inspires me
and assures that I do something useful.

I hope that in future I will study aviation and work
with airplanes or spaceships. Moreover, I am certain
of my life path which is to be connected with space or
aviation industry.

I do believe that my experience, skills and achievements
are sufficient to be considered for earning this scholarship
which certainly help me make further advancement and
extend the necessary knowledge.

Yours faithfully
Wojciech Koszałski
