

Proposal team scoring Kat. 1 events from Germany

Section 7A

5.2.4.3. paragliding:

For the nation task ranking the task result is normalized to 1000points for the winner, then the scores of the two best-ranked pilots of each national team are added up to create each nation's task score. The nations are then ranked by their score, in descending order. Nations with the same score are ranked in the same position.

Declaration team scoring Kat. 1 events

2. 2. The team scoring at Cat1 events

The team scoring at Cat1 events is of high value to the competing countries and pilots. Right now, the performance of a team in regards to placing their pilots in a good position is treated very differently from day to day. It depends heavily on the day quality and the maximum amount of points therefore. A team can only score well in tasks with a high day quality since these create more points than low quality days.

We believe that team performance should be treated independently from the day quality.

The team scoring de facto uses a system of discards (2 out of 5 pilots) and should be treated as a discard scoring therefore. We propose that the daily results are normalized to 1000 points in the team ranking.
