

# German Aviation Club

## Schoolservice – report 2007/8:

1. Regular education and youth activities:

gliding, model aircraft competitions etc.

very many clubs and professional schools are offering pilot licenses

2. Headquarters for youth activities: Haus der Luftsportjugend ( House of aviation sport youth: )

Special offer for schools:

3. Academic glider clubs (1):

4. Cooperation with technical university of Erlangen- Nuernberg and high-tech companies of the region (Siemens, Leoni etc.)

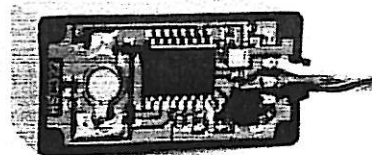

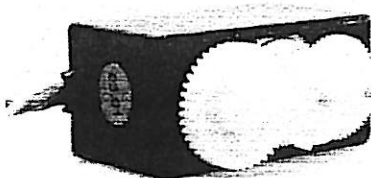

This offer is part of a nationwide strategy to influence the school life of pupils / students. Students mind (and eyes) are opened to technical problems. This project means a lot of additional work for the teacher. But the harvest is great!

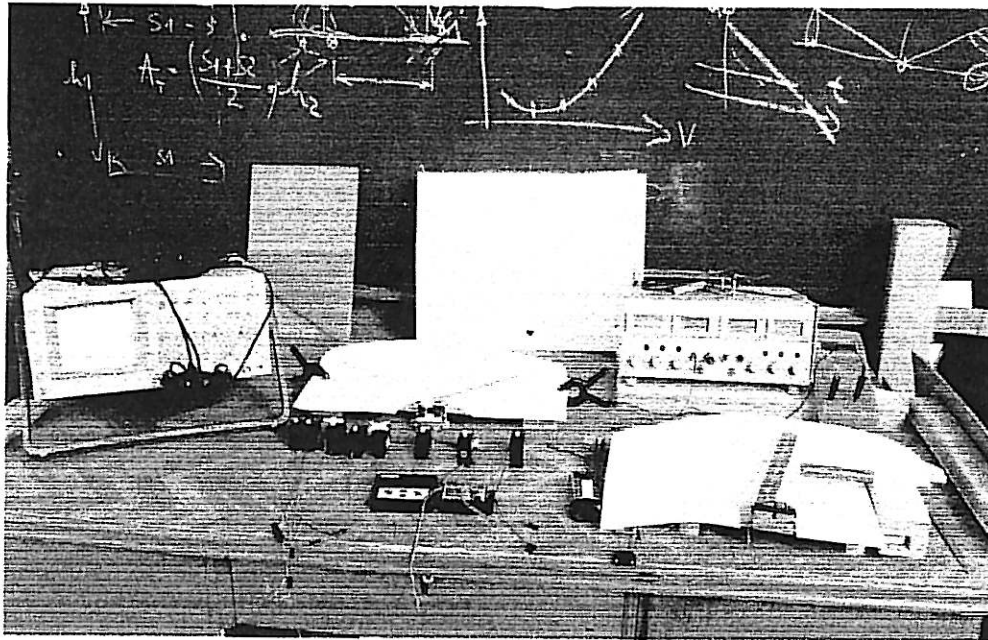

Germany is facing a big gap between offer and demand in the engineer-market.

We want to activate retired aviation personal to come to school as an ambassador of technical knowledge.

5. In my comprehensive school we are using the ideas of Mr. Schimmel and his friends (USA) as he has demonstrated last year in Irleand. We start our aviation projects with control line rubber model aircraft. It is amazing how motivating this idea is. The seed is full of projects!!

6. In Saxonia my friend Hans Langenhagen supervised a project about servos and technical background.

The test desktop for servos. Interested? Get in contact with german aviation club / schoolservice.

7. In germany 2008 is the mathematic year. LUFTHANSA is offering special math workshops and great awards:

More details???
