Section 3 – Gliding

CLASS D (gliders)
including Class DM (motorgliders)

2016 Edition
valid from 1 October 2016

The complete Sporting Code for Gliding is the General Section and Section 3 combined.
Changes of note in the 2016 Sporting Code

1.0.3 Replaces the amendment process flowchart of previous years.

1.4.2h "in the sequence declared" added – in error in the 2015 Code.

Control of FRs used for a claim New wording to specify what FRs may be used for a claim when more than one FR carried in glider. (2.2.6, and 3.5). The igc file of every FR used must be submitted to the OO (3.2.2).

2.4.1, 2.4.2a, 2.4.4a, 4.3.3 A release certificate from the winch operator or tow pilot no longer required for a claim (old 4.4.2e). References to independent evidence of landing time deleted.

2.4.5b “the flight is invalid”.... Corrected the error in the 2015 Code.

3.1.6b Corrected the error in the first (not final) posting of the 2015 Code that disallowed shorter triangles to be claimed.

4.1b Clarification on when an OO may operate in a foreign country.

The text has also been changed in many other places to add clarity or simplify the wording but does not alter the meaning of the Code.
Rights to FAI international sporting events

All international sporting events organised wholly or partly under the rules of the Fédération Aéronautique Internationale (FAI) Sporting Code are termed FAI International Sporting Events. Under the FAI Statutes, FAI owns and controls all rights relating to FAI International Sporting Events. FAI Members shall, within their national territories, enforce FAI ownership of FAI International Sporting Events and require them to be registered in the FAI Sporting Calendar.

An event organiser who wishes to exploit rights to any commercial activity at such events shall seek prior agreement with FAI. The rights owned by FAI which may, by agreement, be transferred to event organisers include, but are not limited to advertising at or for FAI events, use of the event name or logo for merchandising purposes and use of any sound, image, program and/or data, whether recorded electronically or otherwise or transmitted in real time. This includes specifically all rights to the use of any material, electronic or other, including software, that forms part of any method or system for judging, scoring, performance evaluation or information utilised in any FAI International Sporting Event.

Each FAI Air Sport Commission may negotiate agreements, with FAI Members or other entities authorised by the appropriate FAI Member, for the transfer of all or parts of the rights to any FAI International Sporting Event (except World Air Games events) in the discipline, for which it is responsible or waive the rights. Any such agreement or waiver, after approval by the appropriate Air Sport Commission President, shall be signed by FAI Officers.

Any person or legal entity that accepts responsibility for organising an FAI Sporting Event, whether or not by written agreement, in doing so also accepts the proprietary rights of FAI as stated above. Where no transfer of rights has been agreed in writing, FAI shall retain all rights to the event. Regardless of any agreement or transfer of rights, FAI shall have, free of charge for its own archival and/or promotional use, full access to any sound and/or visual images of any FAI Sporting Event. The FAI also reserves the right to arrange at its own expense for any and all parts of any event to be recorded.

Index .......................................................................................................................... 18
The most recent amendments are indicated by a vertical line to the right of any paragraph that has been changed, as shown here. The text may also have editorial changes made to improve its clarity, but such changes are not indicated. Text in italics is informational in nature and not part of the rules of the Code.

1.0 INTRODUCTION

1.0.1 The General Section (GS) of the Sporting Code contains the definitions and rules applying to all air sports. Section 3 (SC3) specifies the rules that apply to FAI badge and record flights in gliders and motor gliders. A glider is a fixed wing aerodyne capable of sustained soaring flight with no Means of Propulsion (MoP). A motor glider is a fixed wing aerodyne equipped with a MoP, capable of sustained soaring flight without thrust from the MoP.

Related documents are Section 6 on gliding aerobatic competition, Section 7 on hang gliders and paragliders (GS-2.1, class O), and Section 10 on microlights (GS-2.1, class R). The FAI document, “Technical Specifications for IGC-Approved GNSS Flight Recorders” gives information for FR manufacturers.

SC3 includes the following annexes:

b. Annex B Requirements for equipment used for flight validation.
c. Annex C Non-regulatory guidance, methods, and sample calculations to assist Official Observers and pilots in complying with SC3.
d. Annex D Rules for the world ranking list of pilots participating in IGC sanctioned competition.

1.0.2 Terms, rules, and requirements in SC3 are defined first in their most general sense, and a word or phrase in small capital letters in this chapter indicates that it has a distinct Code definition. Where an exception to a general rule exists, it is described in the Code where the exception occurs. Within the Code, “record” can apply to either or both World and Continental records according to the context, and “badge” applies to flights at FAI Silver, Gold, Diamond or Diploma achievement levels.

1.0.3 A proposal for an amendment to the Sporting Code or its annexes must be submitted to the IGC Bureau at least six months prior to the next IGC Plenary meeting. A proposal must refer to the paragraphs affected and give reasons for the amendment. It is preferable for the proposed change to be in the format of the Code.

Any substantial change is effective on 1 October following the IGC meeting at which it is approved, except that if it has flight safety implications, the Bureau may approve it prior to the IGC meeting. A simple clarification to the Code becomes effective on 1 October following approval by the Bureau. In either case, the amended Sporting Code is then placed on the FAI web site at <www.fai.org/gliding/sporting_code>.

1.1 GENERAL DEFINITIONS

NATIONAL AIRSPORT CONTROL (NAC) 1.1.1 The organization having administrative responsibility for a nation’s sport aviation activities. The duties of a NAC with respect to gliding are defined in 4.1.

OFFICIAL OBSERVER 1.1.2 The person authorized by a NAC to control flights undertaken for an FAI badge or record attempt and of the data gathered to prove the SOARING PERFORMANCE.

DECLARATION 1.1.3 The pre-flight listing of pilot, aircraft, and other information pertinent to a given SOARING PERFORMANCE (refer to 2.3 for badges and 3.2 for records).
1.1.4 GNSS / GPS
A Global Navigation Satellite System such as the Global Positioning System (GPS) using multiple satellites operating with receivers to record position and time data.

1.1.5 FLIGHT RECORDER
An IGC-approved device to record GPS position and altitude data, as well as barometric altitude. A given FLIGHT RECORDER may be approved for all flights, all badges, or Silver through Diamond badge claims only.

1.1.6 POSITION RECORDER
A NAC-approved device to record GPS data for Silver or Gold badge claims.

1.1.7 BAROGRAPH
A barometer within a FLIGHT RECORDER and some POSITION RECORDERS used to record MSL altitude derived from air pressure data.

1.1.8 MEANS of PROPULSION (MoP) RECORDER
A device that records noise level or other data to indicate MoP use.

1.2 DEFINITION of FLIGHT TERMS

1.2.1 SOARING PERFORMANCE
The portion of a glider flight from the START POINT to the FINISH POINT.

1.2.2 WAY POINT
A point specified by a set of coordinates. A WAY POINT may be a START POINT, TURN POINT, or FINISH POINT. If a word description, abbreviation, or code is used in a paper or internet declaration, its coordinates must be taken from a published source designated by the NAC.

1.2.3 LEG
The straight line between two successive WAY POINTS.

1.2.4 COURSE
All the LEGS of a SOARING PERFORMANCE.

1.2.5 TURN POINT
The WAY POINT between two successive LEGS.

1.2.6 OBSERVATION ZONE
The airspace a glider must enter to attain a declared TURN POINT. It is either:
   a. a CYLINDER having a 500m radius and unlimited height, centered on the TURN POINT, or
   b. a SECTOR, a quadrant having unlimited radius and height, with its apex at the TURN POINT and oriented symmetrical to and remote from the bisector of the inbound and outbound LEGS.

1.2.7 FIX
A single line of recorded data from a FLIGHT RECORDER or POSITION RECORDER containing the time, position and altitude of the glider. The altitude data source may be air pressure or GPS height, depending on the requirement. A FIX does not have an OBSERVATION ZONE.

1.2.8 RELEASE POINT
The WAY POINT where the glider releases or ceases using a MoP.

1.2.9 START POINT
The WAY POINT that marks the beginning of a SOARING PERFORMANCE at either:
   a. the RELEASE POINT, or
   b. declared START coordinates, or
   c. a FIX selected post-flight.

1.2.10 FINISH POINT
The WAY POINT that marks the end of a SOARING PERFORMANCE at either:
   a. where the glider comes to rest on landing, or
   b. declared FINISH coordinates, or
   c. a FIX selected post-flight, or
   d. a FIX established by the starting of a MoP.

1.2.11 CLOSED COURSE
A COURSE requiring the FINISH POINT to be the declared START POINT.

1.2.12 START & FINISH LINES
A 1 km line centered on the START or FINISH POINT. In all cases, a START LINE is perpendicular to the first LEG and a FINISH LINE is perpendicular to the last LEG. For a free CLOSED COURSE using a START FIX, the FINISH LINE is centered on the START FIX.
1.3 DEFINITION of SOARING MEASUREMENT TERMS

START TIME and ALTITUDE
1.3.1 The time and altitude (msl) at which a SOARING PERFORMANCE begins, both determined by the type of SOARING PERFORMANCE and the type of START POINT claimed:
   a. When a declared START POINT is claimed, START TIME and ALTITUDE shall be taken at the
      START LINE as the glider crosses in the direction of the first leg.
   b. When a declared START POINT is not claimed, START TIME and ALTIITUDE shall be taken at
      the RELEASE POINT or alternately, for DURATION and FREE DISTANCE claims, at a FIX
      selected post-flight.

FINISH TIME and ALTITUDE
1.3.2 The time and altitude (msl) at which a SOARING PERFORMANCE ends, both determined by
   the type of SOARING PERFORMANCE and the type of FINISH POINT claimed:
   a. For a finish at landing, FINISH TIME is the time of landing and FINISH ALTITUDE is the landing
      site msl elevation.
   b. When a declared FINISH POINT is required, and for any free CLOSED COURSE, FINISH TIME
      and ALTITUDE shall be taken at the FINISH LINE as the glider crosses in the direction of the
      last leg.
   c. When a declared FINISH POINT is not required, FINISH TIME and ALTIITUDE may be taken at
      the start of a MoP, a FIX selected as the FINISH POINT, or at time of landing, whichever
      occurs first.

DURATION
1.3.3 The elapsed time between the START TIME and the FINISH TIME.

LOSS OF HEIGHT
1.3.4 The START ALTITUDE minus the FINISH ALTITUDE. An excess LOSS OF HEIGHT shall be cor-
    rected as given in 2.4.4 for badges and in 3.1.5 and 3.1.6 for records.

GAIN OF HEIGHT
1.3.5 The recorded altitude difference between a high point and a prior low point.

OZ CORRECTION
1.3.6 When a TURN POINT is achieved using the CYLINDER OZ, the inbound and outbound LEG
    lengths are each decreased by 500 metres.

OFFICIAL DISTANCE
1.3.7 The COURSE distance, less any OZ CORRECTION and/or LOSS OF HEIGHT correction. The
    OFFICIAL DISTANCE shall be used for the claimed distance and calculating COURSE speed.

1.4 BADGE AND RECORD REQUIREMENTS

1.4.1 General Electronic flight data and a DECLARATION are required except where specifically
   exempt. Specific SOARING PERFORMANCES place limits on given COURSES as individually
   defined in 2.2 for badges and 3.1.5 and 3.1.6 for records.

1.4.2 Soaring performance types
   a. GAIN OF HEIGHT A SOARING PERFORMANCE conducted per 1.3.5 for a
      given badge (see 2.2.1c, 2.2.2c and 2.2.3c) or a record
      (see 3.1.7a).
   b. ABSOLUTE ALTITUDE A SOARING PERFORMANCE for maximum altitude (see
      3.1.7b).
   c. DURATION A SOARING PERFORMANCE required for the Silver badge
      (2.2.1b) or Gold badge (2.2.2b).
   d. STRAIGHT DISTANCE A COURSE without TURN POINTS starting from RELEASE
      or a declared START POINT.
   e. GOAL DISTANCE A COURSE without TURN POINTS from a declared START
      POINT to a declared FINISH POINT.
   f. 3 TURN POINT DIST. A COURSE from the RELEASE POINT or a declared
      START POINT to any type of FINISH POINT, using one to
      three declared TURN POINTS in any order.
g. **OUT & RETURN**  
A CLOSED COURSE having only one declared TURN POINT.

h. **TRIANGLE**  
A CLOSED COURSE via 2 or 3 declared TURN POINTS flown in the sequence declared. When 3 TURN POINTS are used, the COURSE distance is the sum of the legs between the TURN POINTS.

i. **FREE DISTANCE**  
A COURSE from any START POINT to any FINISH POINT.

j. **FREE 3TP DISTANCE**  
A 3 TURN POINT DISTANCE flight having FIXES for some or all WAY POINTS.

k. **FREE OUT & RETURN**  
An OUT & RETURN flight having FIXES for some or all WAY POINTS.

l. **FREE TRIANGLE**  
A TRIANGLE flight having FIXES for some or all WAY POINTS.

### 1.4.3 Multiple use of way points
A TURN POINT can have the same coordinates as the START or FINISH POINT. If a TURN POINT is to be used twice it must be listed twice in the task declaration.

*All claims recorded by PR or FR require a pre-flight declaration; see 2.3.2a to 2e for badges, 3.2.1a – 1d for records*
Chapter 2
BADGES and BADGE PROCEDURES

See Annex C for examples of ways and means by which badges may be verified, such as the calculation of distances, and FR or PR data analysis methods.

2.0 GENERAL

a. The FAI Silver, Gold, and Diamond badge flights and the Diploma flights are a set of international soaring achievements that do not need to be renewed. They are awarded by each NAC, who shall maintain a register of the flights it has validated, retaining the pilot’s name, nationality, and the dates and details of each flight performance.

b. The distance requirement shall be the official distance.

c. The pilot must be alone in the glider.

2.1 BADGE DESIGN

2.2 BADGE REQUIREMENTS

2.2.1 Silver Badge

The Silver badge is achieved on completing these soaring performances:

a. SILVER DISTANCE

a straight distance flight of at least 50 km from the release point. *The Silver distance should not be flown with guidance from another pilot.*

b. SILVER DURATION

a duration flight of at least 5 hours.

c. SILVER HEIGHT

a gain of height of at least 1000 metres.

2.2.2 Gold Badge

The Gold badge is achieved on completing these soaring performances:

a. GOLD DISTANCE

a distance flight of at least 300 kilometres as defined in 1.4.2d to 1.4.2h.

b. GOLD DURATION

a duration flight of at least 5 hours.

c. GOLD HEIGHT

a gain of height of at least 3000 metres.

2.2.3 Diamonds

There are three Diamonds; each may be achieved separately by completing one of the soaring performances below and each may be mounted on the Silver or Gold badge:

a. DIAMOND GOAL

a distance flight of at least 300 kilometres over an out-and-return (1.4.2g) or triangle (1.4.2h) course. There is no restriction on the triangle geometry.

b. DIAMOND DISTANCE

a distance flight of at least 500 kilometres as defined 1.4.2d to 1.4.2h.

c. DIAMOND HEIGHT

a gain of height of at least 5000 metres.

2.2.4 FAI Diploma flights

Diploma flights begin with a minimum distance of 750 km and increase in 250 km increments. They may use any course defined in 1.4.2d through 1.4.2h. A Diploma is awarded once only for the incremental distance immediately less than the distance flown.
2.2.5 **Diamond and Diploma badge registration** On completion of all three Diamonds or any Diploma flight, the NAC shall provide the FAI with the information held in its national register per 2.0a. In turn, the FAI will enter the name of the pilot in an international register, and award the pilot a Diploma to recognise these flights.

2.2.6 **Allowed use of flight recorders** In-flight data must be from an FR approved at level 3 ("Diamonds") or higher, or the "controlling NAC" (see 4.1b) may approve use of a Position Recorder (PR) for Silver or Gold badge flights as in 2.6. Diploma flights require a Level 2 FR ("All Badges & Distance Diplomas") or higher.

When more than one FR/PR is on board the flight, only those units selected by the pilot for use and which have been inspected ("controlled") by an OO shall be used for flight claim evidence. The OO shall note the type and serial number of each controlled FR/PR.

2.2.7 **Official Observer duties** Pre-flight control of duration & height flights excepted, OOs shall perform all pre- and post-flight control actions and review related to a badge claim, following applicable SC3 rules and FR/PR Approval Document procedures. This may be done by more than one OO.

2.3 **DECLARATION REQUIREMENTS**
A declaration (1.1.3) is required for all badge claims recorded by an FR or PR.

2.3.1 **Declaration handling** A declaration can be electronic (stored in FR), written (on paper), or internet (via email or web etc.

a. A declaration may be made at any time before the flight, and the last declaration made before take-off is the only one valid for that flight.

b. A written/internet declaration is an option for FR-recorded flight and mandatory for PR-recorded flight. When a subsequent written/internet declaration is made, it must be presented to and countersigned by same OO as the original declaration.

c. If multiple written/internet declarations are made for a single flight, the original of every paper declaration and an electronic copy of each internet declaration shall be submitted with the claim.

d. For Silver or Gold badge claims only, if the pilot or glider information is omitted or incorrect in the FR declaration, the OO certificate required by 4.4.1c shall take precedence.

*See Annex C-2.6 for general notes on declarations and C-6.4 on the format of a declaration as it appears in an .igc file. Consult the FR manufacturer’s user manual to determine which method a FR uses to record declaration date and time.*

2.3.2 **Declaration content** For all claims recorded on a FR or PR:

a. Date of flight.

b. Pilot name.

c. Glider type, and its registration or serial number or unique NAC-assigned contest number.

d. The make, model and serial number of the FR as recorded in the .igc file of the flight. When a PR is used, the make, model and serial number as verified by the OO before take-off.

In addition, for any claim other than for duration, altitude, or straight distance:

e. Way point coordinates.

In addition, for any FR or PR-recorded claim using a written declaration on paper:

f. Pilot and OO signature(s) with date and time of signing.

2.4 **FLIGHT EVIDENCE REQUIREMENTS**
The OO certifying the claim shall follow 4.4.1. For any requirement not witnessed by the OO, the appropriate verification certificate is given in 4.4.2.

2.4.1 **Time evidence** GPS time data shall be substantiated by independent evidence confirming take-off time. The 5-hour duration task may be flown with no FR or PR if it is under the continual attention of an OO, who shall control the task as given in 4.3.3.
2.4.2 **Position evidence** Position data is required only for distance claims, and may be recorded by an FR or a PR for Silver or Gold badge flights. An FR shall be used for Diamond and Diploma flights. Evidence of position shall be gathered as follows:

a. **RELEASE POINT** The release point (or MoP stop) shall be taken from the recorded in-flight data. As soon as possible after release, the pilot should descend or make a steep turn so the data clearly indicates the release point. The release point shall be taken at the start of this descent or turn (see SC3C-10.8a).

b. **START/FINISH LINE** Where a start line and/or finish line is required, position evidence from a FR or PR must show that the glider crossed it. A start and/or finish line is not required for duration, straight distance, or 3TP distance flights.

c. **TURN POINTS ACHIEVED** Position evidence from a FR or PR must show that a fix was recorded within the OZ or a straight line between consecutive fixes passes through the OZ.

d. **FINISH FIX** When a finish fix is claimed, its position shall be taken from the GPS position data.

2.4.3 **Altitude evidence**

a. Barographic data from a calibrated FR on board shall be used if available.

b. If barographic data is not available or the calibration period has lapsed, GPS height data from a FR or PR may be used for Silver and Gold tasks, provided that a 100 metre error margin is applied to all pressure height requirements of the Code (example: the gain of height is at least 1100 metres for Silver altitude). See SC3C-3.3.

c. The altitude at which a glider crosses a start or finish line is determined by linear interpolation between the altitudes at the last fix before crossing and the first fix after crossing.

2.4.4 **Duration evidence**

a. If a duration flight is done under an OO’s continual attention, no FR/PR height data is required.

b. A duration flight is invalid if the loss of height (LoH) is over 1000m using barographic evidence or 900m using GPS height data.

2.4.5 **Loss of height limits for badge flights**

a. For distances greater than 100 kilometres where the LoH exceeds 1000m using barographic data or 900m using GPS height data, an adjustment of 100 times the excess LoH shall be subtracted from the length of the course.

b. For distances of 100 kilometres or less, the flight is invalid if the LoH exceeds 1% of the distance using barographic data or [1% of course distance less 100m] using GPS height data.

2.5 **DATA CALCULATIONS, CALIBRATIONS and VERIFICATION**

2.5.1 **Flight continuity** The FR/PR position data must show the glider did not land and a MoP was not used during the soaring performance. An interruption in altitude data will not compromise proof of flight continuity provided that the OO and NAC are convinced that no critical data is missing and the evidence remains indisputable. Evidence of flight continuity may also be assessed from a time plot of the GPS height data.

2.5.2 **Barograph calibration time limits** The recording barometer function of a FR or PR (if incorporated) must be calibrated within five years prior to the flight or within two months after the flight.

2.5.3 **FR/PR recording procedures** The OO should be familiar with the applicable terms of approval of any FR being used. For each controlled FR/PR used:

a. **BEFORE FLIGHT** The OO shall inspect the installation of each unit as required by its approval document, including sealing if necessary (SC3C-7.3a refers). The data sampling rate must be set to at least once per minute. The type and serial number of any independent MoP recorder used shall also be noted.

b. **TAKE-OFF and LANDING** Use evidence independent of the FR(s) or PR(s) to verify the times and points of take-off and landing, pilot name, glider type and registration. If the landing was not witnessed, the OO shall complete a landing certificate per 4.4.2e.
c. **AFTER FLIGHT** After landing, an OO shall check any seals applied. The OO shall supervise or perform the transfer of data and examine the data for completeness, and achieved way point fixes shall be determined from the evidence and as specified in the badge claim. The .igc file analysis may to be done by any knowledgeable person (guidance is in Annex C, Section 10).

2.5.4 **MoP evidence** The OO shall certify the means used to determine that a MoP was not used during the soaring performance (see 4.3.1b and 4.3.2). The required evidence is specified in the approval document for the MoP recording device used.

2.5.5 **Distance calculation method** If the distance achieved clearly exceeds the requirement, the value calculated by common flight analysis software may be used. For Diploma flights greater than 1000 km, or if the exact distance is critical to achieving the soaring performance, the FAI World distance calculator shall be used set to the WGS84 earth model. SC3C-1.7c refers.

2.6 **THE USE OF POSITION RECORDERS**

2.6.1 **General**

a. Many GPS devices can record the coordinates of their position. If this data can be downloaded in the format of an .igc file, NACs may allow these position recorders (PRs) to be used to validate the horizontal position of the glider for Silver or Gold badge flights. Altitude evidence may also be certified subject to the restriction given in 2.4.3b.

b. NACs shall approve the specific types of PRs for use within their area of responsibility and to maintain a current list of them. A specimen PR-approval document is on the IGC web site and should be used as a basis, modified with the characteristics of the PR concerned. Approval documents for PRs that comply with the Sporting Code will be posted on the IGC website by GFAC.

c. NACs should consult GFAC for advice prior to beginning the approval process for a given PR as there may be known problems with it or it may have been found to not comply with IGC rules and procedures. Guidance on PR operation and the approval process is given in SC3C-6.2 and 6.3.

d. Flight recorders that have lost their IGC approval may, with NAC approval, be suitable to use as PRs if all other requirements below are met.

2.6.2 **Averaging and predicted positions** Any PR that can produce estimated fixes by averaging or predicting based on past fixes is acceptable only if the estimation function is disabled. The OO must supervise the disabling process or verify that it was completed before flight and certify that this was done.

2.6.3 **Downloading and verification** Downloaded data from the PR must be converted as closely as possible to the .igc format. Any download and conversion program should be approved by the NAC and include a means of identifying any change to the .igc file made after the initial download.
Chapter 3
RECORDS and RECORD PROCEDURES

This chapter defines the record types and the evidence, measurements and calculations required to verify them. Annex C gives examples of the means by which this may be done.

3.0 GENERAL
a. No advance notice for a record attempt is required.

b. The pilot must possess a valid FAI Sporting Licence issued by their NAC or FAI (GS-3.1).

c. With the exception of a flight having a crew as defined in 3.1.3b, a World record claim must first be approved as a National record – a Continental record does not. National records are controlled by their own NAC and can differ from or be additional to World or Continental records.

d. The Continental regions defined in GS-2.5 will be used, with the exception that the part of Russia east of the 61° meridian will be assigned to Asia. A flight that crosses the border between Continental regions will be credited to the region in which the flight started.

e. A record claim shall fail should any person involved in the claim alter, conceal, or in any other way misrepresent the evidence with the intent to deceive. The FAI will withdraw the Sporting Licences of those guilty of the fraud and may cancel permanently or for a period of time any other award, record, title, etc. it has conferred. A NAC may be asked to cancel the appointment of the OO(s) involved where appropriate (see 4.2).

3.1 RECORD CATEGORY, CLASS, and TYPE
Record category relates to the pilot, record class to the glider used, and record type to the soaring performance claimed. When a new record class or type is created, a minimum performance level may be set by the IGC and published on the FAI web site.

3.1.1 Pilot category General category includes any pilot. In the Female category, all persons aboard the glider must be female.

3.1.2 Record class FAI Class D glider records are in the following classes:

a. OPEN any FAI Class D glider.

b. 15 METRE any FAI Class D glider with a wingspan not exceeding 15,000 mm.

c. 13.5 METRE any FAI Class D glider with a wingspan not exceeding 13,500 mm.

d. ULTRALIGHT an FAI Class D glider with a takeoff mass not exceeding 220 kg.

(A MICROLIFT glider is an ULTRALIGHT with a wing loading not exceeding 18 kg/m². It does not have separate records).

3.1.3 Multiplace gliders and motor gliders
a. When a multiplace glider is being used, all flight crew must be identified on the FR declaration, be named in full on the claim form, and be at least 14 years old. Only flight crew possessing a valid Sporting Licence will be named in the FAI records register.

b. When the pilot and flight crew claim a world record using a multiplace glider, they may act as a team. In this case, each crew member must hold a Sporting Licence, and the claim will be registered to the declared pilot-in-command.

3.1.4 Record designation Glider records are designated by code letters starting with the FAI code letter for gliders (D), then the glider class, and finally the pilot category (general or female):

a. Open Class glider records designated by adding the letter O

b. 15m Class glider records designated by adding the number 15

c. 13.5m Class glider records designated by adding the letter 13

d. Ultralight glider records designated by adding the letter U
e. General pilot category designated by the letter G.
f. Female pilot category designated by the letter F.

Examples: 
- D13F Gliding, 13.5 metre class, Female
- DOG Gliding, Open class, General

3.1.5 **Distance records**  
A new record claim must exceed the current value by 1 km. If the loss of height (LoH) between the start point and the finish point is greater than 1000 metres, the achieved distance shall be reduced by \(100(\text{LoH} - 1000\text{m})\) metres to give the official distance.

a. Goal distance  
Declared start and finish point with no turn points (TPs).
b. Free distance  
Any start and finish point with no TPs.
c. Out-and-return distance  
Closed course with only 1 TP declared.
Closed course with 1 TP selected from a position fix.
e. 3 TP distance  
1 to 3 declared TPs.
f. Free 3 TP distance  
1 to 3 TPs selected from position fixes.
g. Triangle distance  
Closed course with 2 or 3 declared TPs.
h. Free triangle distance  
Closed course with 2 or 3 TPs selected from position fixes.

3.1.6 **Speed records**  
A new record claim must exceed the current value by 1 km/h. A loss of height between the start point and finish point greater than 1000 metres will invalidate the claim.

a. Out & Return speed  
Course as in 3.1.5c with a distance of 500 km or multiples of 500 km.
b. Triangle Speed  
Course as in 3.1.5g with distances of 100, 300, 500, 750, 1250 km, or greater multiples of 500 km. A record may be claimed for the declared course and any shorter triangle in compliance with the applicable leg length requirements.

3.1.7 **Altitude records**  
A new record claim must exceed the current value by 1% for altitude using pressure data or 150m using GPS data. Altitude records are limited to the Open class.

a. Gain of Height  
See 1.3.5.
b. Absolute altitude  
There must be a gain of height of at least 5000m over the start altitude.

3.1.8 **Triangle geometry**  
For triangle and free triangle courses of 750 km or more, the length of each leg shall be 25% to 45% of the official distance. For courses shorter than 750 km, no leg may have a length of less than 28% of the official distance.

3.2 **DECLARATION REQUIREMENTS**

3.2.1 **Declaration content**  
All record flights require an declaration that includes the information listed below. The last declaration made before take-off is the only one valid for that flight.

a. Date of flight.
b. Name of the pilot-in-command, and the flight crew if any.
c. Glider type, and its registration or serial number or unique NAC-assigned contest number.
d. The make, model and serial number of the FR.
e. Waypoint coordinates, when required.

See Annex C-2.4 for general notes on declarations and C-6.4 on the format as it appears in an .igc file. The FR user manual will give the method used to record declaration date and time.

3.2.2 **Declarations from more than one FR**  
The .igc file from each controlled FR (see 3.5) must be submitted. Except for the declaration time stored, the task declarations must be identical. The FAI reserves the right to deny any claim where the validity of the declaration is in doubt.

3.3 **FLIGHT CONTINUITY**

a. The flight data must show there was no intermediate landing by the glider and a MoP was not used during the soaring performance.
b. An interruption in barographic data will not compromise proof of flight continuity provided the OO and NAC are convinced that no critical data is missing and the evidence remains indisputable.  

*Note: Evidence of flight continuity can be assessed from a time plot of the GPS height data.*

### 3.4 CALCULATIONS and CALIBRATIONS

Any measurement or calculation inaccuracy related to the flight data is to be interpreted to the maximum disadvantage of the pilot. The minimum data required for each type of record is given in the record application forms.

#### 3.4.1 Barograph calibration time limits

The barograph function of an FR must be calibrated within five years prior to the flight or within two months after the flight to claim distance and speed records. Both calibrations are required for altitude and gain of height records, with the less favourable of the two used to make the calculations.

#### 3.4.2 Earth model and distance calculations

WGS84 shall be the model used for all position recording, and the length of geodesic line(s) joining successive way points shall be used to determine leg distance(s).

#### 3.4.3 Calibration and pressure correction

When absolute altitude is to be determined, pressure altitudes recorded during flight must be corrected for both instrument error and non-standard atmospheric pressure. *Guidance is given in SC3C-3.5 and 3.6.*

### 3.5 FLIGHT EVIDENCE REQUIREMENTS

When more than one FR is on board the flight, only those units selected by the pilot for use and which have been inspected (“controlled”) by an OO shall be used for flight claim evidence, and the .igc file from each shall be analysed. The OO shall note the type and serial number of each controlled FR.

The .igc file must be from a controlled FR approved at the “all flights” level. The OO shall be familiar with the applicable approval document. Terms of approval for flight recorders are described in SC3B Chapter 1.

#### 3.5.1 Time evidence

GPS data shall be used, substantiated by independent evidence confirming take-off and landing times and locations. Start or finish time is determined by linear interpolation between the last fix before crossing and the first fix after crossing the start or finish line.

#### 3.5.2 Position evidence

Position evidence shall be taken from the FR .igc file.

a. **RELEASE POINT**  
   The position data shall clearly indicate the release point (or MoP stop). If a release point is to be used for the start, the pilot should descend or make a steep turn as soon as possible after release. The release point shall be taken at the start of this turn or descent. *Guidance is given in SC3C-10.8a.*

b. **START/FINISH LINE**  
   Where a start line and/or finish line is required, the position data must show that the glider crossed it per 1.3.1 and 1.3.2. A start and/or finish line crossing is not required for straight distance, 3TP distance, or free record tasks.

c. **TURN POINTS ACHIEVED**  
   When a turn point is not required to be declared, a fix is selected post-flight. For declared turn points, the position data must show that a fix was recorded within the OZ or a straight line between consecutive valid fixes passes through the OZ.

#### 3.5.3 Altitude evidence

a. Up to 15,000 metres, pressure data recorded by an FR shall be used.

b. Above 15,000 metres, GPS altitude data from an FR approved for high altitude use (HAFR) shall be used. *See Annex B and the Technical Specifications for IGC FRs for procedures.*

c. For altitude flights, both GPS and pressure altitude shall be recorded. The resulting profiles of the GPS and pressure altitudes must correspond to ensure no anomaly is present in the evidence.

d. For a gain-of-height record claim having a high point above 15,000 metres, the evidence for the low point shall also come from GPS altitude data.

e. The altitude at which a glider crosses a start or finish line is determined by linear interpolation between the altitudes at the last fix before crossing and the first fix after crossing.
3.5.4 **Means of propulsion evidence and MoP recorder procedures** The OO shall certify in Record Form D (see 3.6) the means used to determine that the MoP recorder functioned correctly.

3.5.5 **FR recording procedures** To maintain control of the FR and its .igc file, the OO shall:

a. **BEFORE FLIGHT** Verify the installation and set-up of each FR from which an .igc file will be submitted. The data sampling rate must be set to at least once per minute.

b. **TAKE-OFF and LANDING** Use evidence independent of the FR(s) to confirm the times and points of take-off and landing, pilot name(s), glider type and registration, and the make, model, and serial number of each FR used. See 4.4.2e for a landing having no witnesses.

c. **AFTER FLIGHT** Inspect any seals applied to each FR before flight and either perform or supervise the transfer of the .igc file from each device. Perform a security check on each file using the appropriate validation program and review the file for completeness. If the file is to be sent to another person for complete analysis, the following shall be forwarded:
   - The original data on the memory device (the first copy). This must include the .igc file, and the file in its original format (if different) as transferred from each device immediately after landing.
   - The appropriate claim form(s), including OO’s evidence that any manually recorded times and exact locations for the flight correspond to the equivalent flight recorder data.

d. **ANALYSIS** With the exception of a member of the flight crew, analysis of the data shall be performed by a person approved by the NAC. The analyst shall ensure the appropriate evidence is present to verify the record claim. Achieved way point fixes shall be determined from the FR evidence and specified in the record claim. Analysis guidance is in SC3C-10.

3.6 **FAI RECORD CLAIM FORMS**

For claims submitted to the FAI, the current IGC-approved FAI claim forms must be used. Forms are available from the IGC web site <http://www.fai.org/gliding>, and in hard copy from the FAI office and NACs. For national records, the NAC may issue its own forms similar to the FAI versions.

a. **Form A** Absolute altitude or Gain of Height records (Open class only)

b. **Form B** Distance records

c. **Form C** Speed records

d. **Form D** Motor glider records. Form is additional to other forms if appropriate to the claim.

e. **Form E** Completed by all NACs involved. Form must be included with claim file.

3.7 **TIME LIMIT on CLAIMS**

Notice of a record claim must be submitted by the NAC or the OO controlling the flight, and the FAI must receive the claim within seven days of the flight. In exceptional circumstances, the president of the IGC may grant an extension. Telephone, fax, e-mail, and similar types of notification are acceptable.

The NAC shall forward claim documentation to reach the FAI within 120 days of the date of the flight unless an extension of time has been authorised by the IGC President (GS-6.8.1 refers).
Chapter 4

OFFICIAL OBSERVERS and CERTIFICATION

4.1 NATIONAL AIRSPORT CONTROL

The National Airsport Control (NAC) has administrative responsibility for a nation’s sport aviation activities, such as issuing Sporting Licences. The verification of national records and other responsibilities are often delegated to the national gliding body. In SC3 and Annex C, NAC refers to either body. See Annex C-1.2 and 1.3 for recommended practices by NACs.

a. ORGANISING NAC The pilot’s nationality or residency determines the NAC responsible for issuing them a Sporting Licence. This NAC, the organising NAC, also certifies the pilot’s achievement and, in the case of an International record, the record claim dossier going to the FAI, regardless of where the record attempt took place.

b. CONTROLLING NAC When a record or badge flight originates in a country other than that of the organising NAC, the NAC of the host country shall control the flight and may appoint OOs of the organising NAC to act on its behalf if it so chooses. If allowed by the controlling NAC, the OO may forward the completed claim directly to the organizing NAC.

c. If a controlling NAC does not exist or is inactive in a country, the organizing NAC may control a record or badge flight there. If the organizing NAC is not sure of the current FAI status of a country, it shall contact sports@fai.org (or sec.gen@fai.org if FAI Sports is unavailable).

4.2 OO REQUIREMENTS

4.2.1 Appointment and jurisdiction OOs are appointed by their organizing NAC on behalf of the FAI. Directors of competitions sanctioned by FAI or a NAC may act as OOs for badge or record flights undertaken during a contest. OOs are entitled to serve within the jurisdiction of the appointing NAC and may control flights made by glider pilots of any nationality if the controlling NAC so permits.

4.2.2 Duties As representatives of the FAI, OOs oversee FAI badge and record attempts, and other soaring performances a NAC may define within its authority. In case of violation of duty by an OO, the appointment of the OO shall be withdrawn. In addition, negligent certifications or willful misrepresentations are grounds for disciplinary action by the NAC concerned.

4.2.3 Competence

a. OOs must be familiar with the Code and pertinent air regulations, and have the integrity, skill, and competence necessary to control and certify them. An OO should be given training appropriate to the duties of an OO prior to being approved by a NAC.

SC3C-1.3 gives recommended practices for NAC administration of OOs.

b. The OO shall be familiar with the operation and limitations of all evidence recording equipment used on the flight. See also SC3C-10.8 and SC3C Appendix 5-1.3.

c. To verify a World or Continental record the OO must be approved, in writing, by the OO’s NAC. Previous satisfactory experience as an OO for badges or national records should be a prerequisite.

4.2.4 Conflict of interest Ref http://www.fai.org/downloads/fai/code_of_ethics

All persons involved in data verification and claim approval must conform to the FAI Code of Ethics, evaluating the claim objectively according to the rules and procedures of the Code. As such, no one involved in ratifying a World or Continental record claim may have a special personal interest in the outcome of that claim, and OOs may not act for any record or badge attempt in which they have any financial interest or in which they are the pilot or passenger.

Ownership of the glider shall not be considered “financial interest”. In essence, monetary or other substantial gain shall not depend on the successful certification of the claim by the OO or other individuals concerned.
4.3 **FLIGHT CONTROL and VERIFICATION**

Refers to OO actions taken to ensure the integrity of evidence supporting a badge or record claim, and the required evidence gathering and evaluation functions performed in relation to the flight.

4.3.1 **Pre-flight control actions**

For each FR or PR, an OO must perform the actions required by 2.5.3a for badge flights or 3.5.5a for records and, if used:

a. A written declaration for a badge flight is certified by adding the date and time and signing it (2.3.2f refers).

b. For motor glider flights, verify the means used to detect MoP use (see 2.5.4 for badges or 3.5.4 for records).

4.3.2 **Post-flight control actions**

For each FR or PR, an OO must perform the actions required by 2.5.3c for badge flights or 3.5.5c for record flights. Complete FAI Claim Forms (see 3.6) for a record flight or NAC equivalents for a badge flight.

4.3.3 **Control of a duration flight made under an OO's continual attention**

The OO must witness both take-off and landing and verify release time, supplemented as necessary by available evidence such as flight logs maintained at the take-off and landing site to confirm uninterrupted flight.

4.3.4 **Verification**

The OO certifying the claim shall verify the aircraft flown, crew name(s), and the times and locations of take-off and landing based on personal observation, supplemented if necessary by the written flight logs maintained at the take-off and landing site(s). In the latter case, the OO shall attach to the claim form legible photocopies of the pertinent flight logs. If any required detail is not verified as above, the appropriate verification certificate given in 4.4.2 is required.

4.4 **CERTIFICATES**

A certificate is a written statement signed by a person who has first-hand knowledge that the statement is true. Whether part of a pre-printed claim form or provided as an attachment, any required certificate must clearly relate to the flight, contain the information required, and be signed by the appropriate person(s). Calibration certificates excepted, any person signing a certificate shall also provide his or her name, address and, if possible, contact phone number or e-mail address.

4.4.1 **Certification by OO**

More than one OO may be involved in a flight claim. Individual certificates pertaining to portions of flight evidence shall be verified by the OO involved. A “certifying OO” shall gather the requisite certificate(s) from all OOs involved in the claim and complete and verify the information in the applicable FAI record claim form(s) or NAC-specified badge claim form(s). At a minimum, the certifying OO shall:

a. review the pre-flight declaration.

b. verify the physical evidence of the claim per 4.3.4.

c. evaluate the flight data on the .igc file.

d. confirm that all applicable OO control actions in 4.3 were performed.

e. obtain required certificates listed in 4.4.2 and countersign those that are complete and consistent with the claim.

4.4.2 **Certificates required**

a. **PILOT CERTIFICATE OF REGULATORY COMPLIANCE**

   For all claims the pilot must certify that the flight was conducted in accordance with the Code, was flown in compliance with all the glider manufacturer’s and national operating limitations, and in accordance with national flight regulations (airspace use, night flight, etc.).

   *For records, this certification is on the IGC Record Forms A, B, and C.*

b. **OO CERTIFICATE**

   For all claims, this certificate shall list applicable control actions and, for each one, the date it was performed and the signature and OO number of the OO who performed it. Certificates may originate from more than one OO in a given claim.

c. **CORRECTION CERTIFICATE**

   This certificate shall identify the glider and the pilot when the data entered or stored in an FR/PR is incorrect. The certificate must be signed by an OO.
d. TAKE-OFF  This certificate shall list the time and location of take-off.

e. LANDING  This certificate shall list the time and location of landing. It may be signed by an air
traffic controller who witnessed the landing. If no one witnessed the landing, two witnesses or an
OO shall certify the precise location of the glider and the time and date of that observation.

f. CALIBRATION CERTIFICATE  Instrument error at intervals throughout the FR or PR range shall
be listed on a current calibration certificate that includes the laboratory’s logo or name. This certifi-
cate shall include:

• FR or PR model and serial number and the range of its pressure transducer.
• date of calibration
• calibration table
• date, name, and signature of calibration laboratory official.

A typical calibration procedure and certificate format is included in SC3C, Section 11.
Chapter 5
GLIDER CLASSES and INTERATIONAL COMPETITIONS

5.0 GENERAL
This chapter gives the class structure and some general rules for FAI World Gliding Championships and other international competitions. Detailed rules for World Championships and other international competitions are given in Annex A to this code (SC3A) and also in the General Section of the FAI Sporting Code. Where “competition” shows in any of these rules, the rule applies to both World Championships and other international competitions.

In order to claim a badge or a record achieved during a competition flight, the requirements of the Code must be fulfilled regardless of the regulations of that competition.

5.1 CLASS CONFORMITY

5.1.1 Record flights An OO shall certify that the glider used for a record flight complies with the requirements for the class rules of the record classification involved and shall certify any measurement and checking required.

5.1.2 Competitions Gliders shall be presented to the competition organiser as prescribed in the local regulations in order to be checked and measured for compliance with class rules.

5.1.3 Measurement of wing span Wing span, for the purpose of conformity with class rules, is the maximum distance between the two planes tangent to the wing tips and parallel to the glider plane of symmetry and the weight of each wing supported to allow the wing to match its unloaded shape.

The unloaded shape depends on the design of the glider, but will generally mean that the trailing edge is straight along the length of the wing.

5.1.4 Mass limits Competition rules may limit the maximum mass of a glider in any class. Any limit must be stated in the official bid and must be approved by the IGC.

5.1.5 Change of components Except where allowed in the Championship rules, a glider shall use the same set of wings or wing components, fuselage and tail unit for the duration of the competition.

5.1.6 Airworthiness A glider must hold a valid Certificate of Airworthiness or Flight Permit that does not exclude competition flight and complies with the conditions of its airworthiness documents.

5.2 HANDICAPPING
The purpose of handicapping shall be to equalise the performance of competing gliders as far as possible. The handicap values used shall be directly proportional to the expected cross-country speeds of gliders in typical soaring conditions for the competition concerned.

If handicapping is to be used it shall be applied directly to the achieved speed for finishers, or to the distance for non-finishers. Competitors completing the task shall not be given less than full distance points, and competitors not completing the task shall not be given more than full distance points. Any list of handicaps proposed for a competition must be approved by the IGC.

5.3 TIME PERIOD for CLASS CHANGES
The minimum period between the announcement and implementation of a new class or major alteration to the rules of an existing class shall not normally be less than four years. Minor alterations not requiring design changes shall normally have two years notice. The IGC may reduce the period of notice for special reasons.

5.4 WORLD CHAMPIONSHIPS
World Gliding Championships are organised in the classes defined below. Women's Championships and Junior Championships may also be organised at the World Championship level. Motor gliders are integrated into the other championship classes.
5.5 COMPETITION CLASSES

5.5.1 Open Class  No limitations.

5.5.2 20 metre multiplace
   a. ENTRY  The class consists of gliders having a crew of two persons. The crew must represent the
          same NAC and have a Sporting Licence issued by that NAC. The winning crew shall jointly hold the
          title of Champion.
   b. WINGS  The span must not exceed 20,000 mm.
   c. BALLAST Disposable ballast is permitted.
   d. SCORING Except in World championships, scoring formulas may include handicap factors. If
      handicaps are to be used, the gliders must have a handicap factor within the range used for the
      competition.

5.5.3 18 metre Class  The only limitation is a maximum span of 18,000 mm.

5.5.4 15 metre Class  The only limitation is a maximum span of 15,000 mm.

5.5.5 13.5 metre Class  The only limitation is a maximum span of 13,500 mm.

5.5.6 Standard Class
   a. WINGS  The span must not exceed 15,000 mm. Any method of changing the wing profile
          other than by normal use of the ailerons is prohibited. Lift increasing devices are
          prohibited, even if unusable.
   b. AIR BRAKES  The glider must be fitted with air brakes that cannot be used to increase perform-
                   ance. Drag parachutes are prohibited.
   c. WHEEL  The undercarriage may be fixed or retractable. The main landing wheel shall be at
              least 300 mm in diameter and 100 mm in width.
   d. BALLAST  Disposable ballast is permitted.

5.5.7 Club Class  The purpose of the Club Class is to preserve the value of older high performance
                 gliders, to provide inexpensive but high quality international championships, and to enable pilots
                 who do not have access to gliders of the highest standard of performance to take part in contests at
                 the highest levels.
   a. ENTRY  The only limitation is that it is within the agreed range of handicap factors
             for the competition.
   b. BALLAST  Disposable ballast is not permitted.
   c. SCORING  Championship scoring formulas shall include handicap factors.

5.6 INTERNATIONAL COMPETITIONS
International competitions may be held in the World Championship classes and in other classes specifically
approved by the IGC. Certain championships have a restricted entry:

   a. WOMEN'S CHAMPIONSHIPS  Championships in one or more of the approved classes that are
                                 open to female flight crew only.
   b. JUNIOR CHAMPIONSHIPS  Championships in one or more of the approved classes that are
                              open to pilots whose 25th birthday occurs in the calendar year (1 January to 31 December) that
                              includes the date of the start of the championships, or occurs later.
