SC4_Vol_EDIC_20 Effective 1st January 2020
Section 3 – F3E Energy Limiter V 1.0
Initial Publication: 01 July, 2016

GUIDELINES FOR AIRFIELD LAY-OUT, SAFE AND UNSAFE AREAS
AND POTENTIAL LANDING AREAS

F3E.A2.1 OBJECTIVE

a) This Guide is intended to specify guidelines for the organisation of F3E international contests, for the benefit of both the organisers and the competitors. It is emphasised that these are recommendations and they do not have the same status as the binding regulations in the FAI Sporting Code unless they concern any regulation in that Code.

b) Since this Guide will be widely distributed and should be regarded as the standard for F3E international competitions, organisers should avoid confusion by announcing in advance any changes from this Guide that may be necessary to suit local circumstances as long as those changes are not in contravention of any of the regulations in the Sporting Code.

c) This Guide is primarily applicable to World and Continental Championships, but parts of it may be useful for open international competitions.

F3E.A2.2 Diagrams 1 and 2 give the ideal competition site layout for F3E in order to attain maximum safety for competitors, race course personnel and spectators.

F3E.A2.3 The local situation may require that a different, but as safe as possible, layout has to be applied subject always to strict compliance with F3E rule 1.10. Two orientations are drawn for the airfield lay-out, one with No 1 pylon at the right side as seen from the pits and the other one with No 1 pylon at the left side.

F3E.A2.4 The diagrams are partly based on an assessment of ground impact in a number of major Pylon Racing competitions. Such assessment should continue as a standard routine to inform the F3 Pylon Racing Subcommittee, which, for safety reasons, may lead to modifications of the preferred airfield layout in the future.

F3E.A2.5 The Contest Director or Starter will designate the landing area. The competitors shall be informed of the landing area before the start of the competition and if necessary (eg by changing wind conditions) by the Starter before a race starts. The landing area should have in any case sufficient distance to the pits and the judges.

F3E.A2.6 Diagrams 1 and 2 show how a landing area can be defined.

Note: refer to the diagram at 1.10 for the pilots’ area.

In the case that the area around the race course is of poor quality for landing and there is a tarmac strip inside the triangular race course, landing may take place on this tarmac strip. In this case all pilots and callers must go to a safe position designated by the Starter, outside the triangle, before the first model aircraft lands.

Diagrams 1 and 2 appear overleaf.
Diagram 1 – F3E Site Layout 1
N° 1 pylon at left side as seen from pits

Diagram 2: F3E Site Layout 2
N° 1 pylon at right side as seen from pits
ANNEX F3E A3

GUIDELINES FOR THE DUTIES OF FAI JURY, CONTEST DIRECTOR, JUDGES AND OTHER OFFICERS

F3E.A3.1 OBJECTIVE

a) This Guide is intended to specify guidelines for the organisation of F3E international contests, for the benefit of both the organisers and the competitors. It is emphasised that these are recommendations and they do not have the same status as the binding regulations in the FAI Sporting Code unless they concern any regulation in that Code.

b) Since this Guide will be widely distributed and should be regarded as the standard for F3E international competitions, organisers should avoid confusion by announcing in advance any changes from this Guide that may be necessary to suit local circumstances as long as those changes are not in contravention of any of the regulations in the Sporting Code.

c) This Guide is primarily applicable to World and Continental Championships, but parts of it may be useful for open international competitions.

F3E.A3.2 FAI International Jury

a) Observation of the competition in general including the standards of judging and handling of official protests.

b) For the appointment and specific duties of the FAI international Jury refer to CIAM General Rules.

c) The members of the FAI Jury are invited to and, should be present at, each team managers’ meeting, each briefing of the judges, the opening and awards ceremonies.

F3E.A3.3 Contest Director (CD) (1)

a) The Contest Director is the “general manager” of the competition. During a racing event, an unforeseen situation may arise that requires immediate action. Therefore, the CD is authorised to initiate any special procedure that he deems necessary to rectify a situation that may be considered unsafe.

b) Any protest shall be handed to the CD. Protest procedures are described in CIAM General Rules C.20.

c) The CD will assign the landing area.

d) The CD is the person responsible for the draw for the heats. The FAI Jury or a member thereof will be present when the draw takes place.

F3E.A3.4 Starter (1) (+ Assistant Starter if necessary (1))

a) The Starter acts for the CD in all matters arising on the racecourse. Unless overruled by the CD, the Starter’s actions and decisions concerning the start, finish, and operation of each heat are final.

b) The Starter’s primary duties are to signal the start and finish of each heat, co-ordinate the efforts of the other racecourse workers, and to transmit the scores and times from each heat to the Assistant Starter or scorekeeper. The Starter should be equipped with the following:
   (i) a clipboard containing the draw of the heats;
   (ii) a signal flag, preferably one bearing the classic black-and-white chequerboard pattern;
   (iii) a walkie-talkie or headset radio.

c) A helpful accessory is a large starting clock with a clearly visible sweep hand.

d) The Starter should stand ahead and to the right of the starting line, as viewed from the pilots’ standing area facing No 1 pylon. When the pilots have reached their assigned positions on the starting line, the Starter should direct the pilots or callers to hold up the aircraft one by one, so that all the racecourse workers can clearly see and identify them. The Starter should then communicate (via a coloured flag or a walkie-talkie) a unique identifying colour for each aircraft.

e) The Starter will check if all pilots and callers are wearing helmets.
f) After identifying the aircraft, the Starter should ask the pilots to make sure their transmitters and receivers are turned on and functioning properly. He should ask to see a “wiggle” of confirmation from one of the control surfaces on each aircraft and get confirmation that everyone is ready to start.

g) After that, the Starter announces the start of the 10 seconds period for starting.

h) The closest model aircraft to be started first. The Starter shall give the starting signal (flag drop or light signal) at one second intervals pointing with his finger to the aircraft that is next to start. Timing commences at the starting signal for that particular model aircraft. Any model that is not ready to start at the starting signal will not affect the Starter's sequence of actions.

j) During the race the Starter will judge whether the pilots and callers stay inside the pilots’ area. If a pilot or caller intentionally steps out of this area with two feet the Starter will give a penalty.

k) The Starter will take care that pilots are sufficiently separated and will take preventive action if a collision between pilots or their transmitter antennas is likely to occur.

l) The Starter should call the competitor’s colour or racing number and “up and out” to any pilot who appears to have double-cut or who is otherwise disqualified.

m) After the finish of each aircraft, the Starter will inform each competitor that his race has finished. This means that the pilot has been given the command to shut off his engine and has 10 seconds in which to comply. If the pilot fails to shut off his engine within the 10 seconds and he has not been given express permission by the Starter to continue to fly, then he will be disqualified for that heat.

n) The Starter judges the landing procedures and will disqualify competitors that land outside the designated landing area and any pilots or callers that enter the landing area before the last model aircraft has stopped.

o) At the end of the race, the Starter will collect the scores, all infringements and race times from the officers and convey them to the Scorekeeper. Any disputes concerning the number of laps flown, times, cuts, etc, should be resolved promptly at the conclusion of the heat.

p) Since the Starter has many duties, an Assistant Starter may be necessary. The Assistant Starter will be under the full authority of the Starter. His duties will be allocated by the Starter.

F3E.A3.5 Timekeepers/Lap Counters (3)

a) The job of each time-keeper/lap counter is to follow one aircraft, to the exclusion of all others, for the duration of the heat and to accurately record the elapsed time and laps completed for that one aircraft. Ideally, the time-keeper/lap counter’s eyes should never leave his assigned aircraft between the time it is held up for identification on the starting line and the time the Starter gives it the chequered flag at the end of the heat.

b) Standard equipment for the time-keeper/lap counter consists of a stopwatch and a hand-held clicker or similar device for counting laps. At least one of the timekeepers/lap counters should also be provided with a walkie-talkie, headset radio, or other means of communication with the Starter on the racecourse.

d) Each timekeeper/lap counter should start his stopwatch for his assigned aircraft at the start signal from the Starter.

e) Each timer/lap counter should record a lap completed each time his assigned aircraft crosses the start/finish line.

f) On the pilot’s last lap, the timer/lap counter should watch for the aircraft to cross the start/finish line and stop the stopwatch at the instant it does so.

g) If the stopwatches are capable of a “split” function, it is a good idea to get all lap times. This may help in case of protests for timing errors.

h) If electronic timing and lap counting are available, they can be used instead of the manual system as described above.

F3E.A3.6 No1 Pylon Judges (3)

a) Like the timekeepers/lap counters, the No. 1 pylon judges each watch one assigned aircraft, to the exclusion of all others, for the duration of the heat.

b) The primary job of each No. 1 pylon judge is to signal the pilot when his aircraft has completed the required distance to the No 1 pylon and can, therefore, turn without cutting.

c) The secondary job of each No. 1 pylon judge is to notify the No 1 pylon chief judge if the aircraft turns before getting to the pylon.

d) No 1 pylon judges are stationed on the sideline, looking directly out (ie. perpendicular to the sideline) toward No 1 pylon.
e) A № 1 pylon judge’s standard equipment consists of:
   i) a colour-coded signal light and shutter, both of which have a sufficiently fast response time (< 0.05 s) or a flag with which to signal a turn;
   ii) some form of indicator with which to signal a cut.

f) As viewed from the sideline, it is not possible for an aircraft to both complete the required distance to the № 1 pylon and also to cut inside the № 1 pylon on the same turn. Therefore, if a judge has signalled the pilot that he has completed the distance, then a cut should not be called.

g) When the aircraft are held up for identification before the beginning of the heat, the № 1 pylon judge for each lane should flash or waggle the turn signal device to indicate recognition of his assigned aircraft.

h) After launch, and after his assigned aircraft crosses the start/finish line on each succeeding lap, each № 1 pylon judge should do as follows:
   i) If the signal device is a flag, hold the flag aloft so that it is clearly visible as the aircraft approaches, then drop it smartly the instant the aircraft intersects the imaginary vertical plane established between the positions of pylon judges Nos 1 and 2 on the sideline. (See F3E race course layout, 1.10)
   ii) If the signal device is a shutter or light, activate it crisply at that same instant and hold it in the open or “on” position and close it or switch it to “off” again when the model aircraft crosses the imaginary vertical plane established between the positions of pylon judges Nos 1 and 2 in the other direction.

i) If the cut signal indicator is simply a continuous flashing or waving of the signal device then a № 1 pylon judge must be sure to flash or wave, as appropriate, for at least several seconds and communicate the cut to the № 1 pylon chief judge. If he agrees that it is indeed a cut, then the chief judge will notify the Starter. Signalling continues as before.

j) A turn is legitimate (ie there is no cut) if any part of the aircraft goes past the pylon. If there is any doubt about a possible cut, then the pilot should be given the benefit of the doubt.

F3E.A3.7 № 1 Pylon Chief Judge (1)

a) The № 1 pylon chief judge is stationed with the № 1 pylon judges and should be equipped with a walkie-talkie or headset. The chief judge communicates aircraft identification information to the № 1 pylon judges at the beginning of each heat, confirms any cuts called by the № 1 pylon judges and relays cut information to the Starter.

b) Other than the Starter, the № 1 pylon chief judge should be the most experienced worker on the racecourse.

F3E.A3.8 № 2 & 3 Pylon Cut Judges (3 + 3)

a) The primary job of the № 2 & 3 pylon cut judges is to watch their assigned aircraft in each heat and relay any cut information to the Starter.

b) Standard equipment for the cut judges includes a chair and sunshade; a walkie-talkie or headset; a notepad or dry-erase board on which to note colour schemes and other aircraft identification information for each heat.

c) Each of the cut judges may also be equipped with an ordinary transmitter antenna, fishing rod, or thin dowel mounted vertically on a stand or stake in front of his chair to help judge whether the aircraft are staying outside the imaginary vertical line extending above the pylon.

d) The № 2 & 3 pylon cut judges should be positioned on the sideline, looking out toward their respective pylons at an angle sufficient to see whether the aircraft are cutting the pylons. (See the F3E course layout, 1.10)

e) When the aircraft are held up for identification before the beginning of the heat, the № 2 & 3 pylon judges for each lane should indicate recognition of the assigned aircraft.

f) The judge may simply put a check mark his notebook or dry-erase board during the race, and then report to the Starter the total number of cuts recorded for his assigned aircraft at the end of the heat.

g) If electronic means are used for cut judging, this information will be recorded automatically by the computer system.

h) A turn is legitimate (ie. there is no cut) if any part of the aircraft goes outside and around the pylon.

i) If there is any doubt about a possible cut, then the pilot should be given the benefit of the doubt.

F3E.A3.9 Sideline Judges (3)

a) The sideline judges each follow their assigned model aircraft and are tasked to monitor low flying around the pylons and any flying over the sideline.
b) Additional to their task could be to judge whether a model aircraft is flying erratically or dangerously and to inform the Starter so that he may instruct the pilot to land the model aircraft.

c) Since this type of judging has strong subjective elements and the decisions of these judges will lead to penalties or disqualification it is necessary that these judges are trained and experienced people and that judging standards are established, and consensus about judging attained, before the start of the competition.

F3E.A3.10 Scorekeeper (1)

a) The scorekeeper collects recorded heat times, infringements and disqualifications. He calculates the scores and enters them on a master list, scoreboard or computer as the contest progresses.

b) The scorekeeper should be equipped with a walkie-talkie or other means with which to communicate with the Starter.

c) The scorekeeper may be the same person who assists the CD in making the draw for the heats.

F3E.A3.11 Technical Officer (1)

a) This officer (and his assistant(s)) is responsible for the duties described in paragraph 5.2.3.

b) If he finds that models do not conform to technical specifications he will report this to the CD who will decide if the competitor should be disqualified for the competition. If a model aircraft does not pass the pre-flight safety check, then it will not be permitted to fly in that race unless the necessary modifications are made to the Technical Officer’s satisfaction before the next race. During the pre-or post-flight check, the Technical Officer will also check the FAI stickers and stamps on the models that will be, or were, flown in a heat. He will write the identification numbers on the starting list. He will also check the identification marks on engines and on the silencers. If numbers and marks are not present or they do not match the numbers and marks of the competitor, the competitor will not be permitted to fly in that heat and the Technical Officer will report these facts to the Contest Director.

F3E.A3.12 Safety Officer (1)

a) The duty of this officer is to monitor safety and record all race accidents, crashes and other situation that are potentially dangerous and report to the CIAM F3 Pylon Racing Subcommittee.

b) He may also assist the CD in safety matters.

F3E.A3.13 Pit Boss (1)

a) The Pit Boss calls up the pilots by heats to prepare and place their aircraft in the Ready Area. A public address system is helpful in this task. The Pit Boss should, if possible, be equipped with a walkie-talkie to communicate with the Starter.

F3E.A3.14 Transmitter Impound Supervisor (1)

a) This person should be provided with a large rack or folding table, protected from the sun and rain, on which to collect and safeguard the contestants’ transmitters.

b) Transmitters should only be handed back to those pilots who are on their way to the Ready Area. When returned to the Impound after each heat, the transmitters should be checked to ensure that they are switched off.

c) The Transmitter Impound supervisor shall operate a spectrum analyser or other adequate radio monitoring equipment for the purpose of detecting radio interference.

d) He must be equipped with a walkie-talkie or headset to enable him to communicate with the Starter and the Pit Boss...

e) In the case of detection of potential interference he shall immediately notify (by walkie-talkie or head set) both the Pit Boss and the Starter.

f) The Transmitter Impound Supervisor may also be one of the people who helped with registration, inspection, or setting up the matrix.

F3E.A3.15 Emergency - First Aid (1)

At least one qualified medical attendant should always be available on the site when flying is permitted. An ambulance & crew must be available.

F3E.A3.16 Combination of Functions

a) The complete set of officers as listed totals 29. For many organisations it will be hard to arrange this number of judges and helpers.

b) It is possible to combine some of the functions for smaller competitions. For example:

i) One judge for each of the Nos 2 & 3 pylons is acceptable. In this case, these judges would need a notebook in which to write down pylon cuts and associated aircraft colours.
ii) The number of sideline judges could be reduced to one who would observe the flying over the sideline and look out for any dangerous or erratic flying by any of the three competitors. Low flying near the pylons could be judged by the pylon judges.

iii) The Technical Officer could also be the Safety Officer

iv) The Scorekeeper could be one of the Timekeepers

v) The N°1 Pylon Chief Judge could be one of the N° 1 Pylon Judges

vi) The Pit Boss could also be the Scorekeeper, Transmitter Impound Supervisor and/or Fuelling Station Supervisor.

c) The minimum number of personnel combining functions is 17-19.
ANNEX F3E A4
TECHNICAL EQUIPMENT

F3E.A4.1 OBJECTIVE

a) This Guide is intended to specify guidelines for the organisation of F3E international contests, for the benefit of both the organisers and the competitors. It is emphasised that these are recommendations and they do not have the same status as the binding regulations in the FAI Sporting Code unless they concern any regulation in that Code.

b) Since this Guide will be widely distributed and should be regarded as the standard for F3 international competitions, organisers should avoid confusion by announcing in advance any changes from this Guide that may be necessary to suit local circumstances as long as those changes are not in contravention of any of the regulations in the Sporting Code.

c) This Guide is primarily applicable to World and Continental Championships, but parts of it may be useful for open international competitions.

Other than the equipment specifically required by the FAI Sporting Code, it is strongly recommended that the following technical equipment is provided by organisers:

F3E.A4.2 Spectrum Analyser

a) See CIAM General Rules C.16.2.5 regarding equipment to detect radio interference.

b) During the competition the spectrum analyser shall be operated by the Impound Supervisor and during any practice sessions by the Safety Officer.

F3E.A4.3 Public Address (PA) Systems

A PA system that may be used for addressing both the competitors (calling them for flights, etc) and spectators.

F3E.A4.4 Model Processing.

a) A means of effectively marking registered models.

b) Spare FAI model aircraft specification certificates and stickers.

c) Equipment for processing batteries and energy limiters.

d) Equipment to accurately weigh models, measure models and compute the projected area, both on and off the flying site. A computer running an appropriate program for the latter measurements is recommended.

F3E.A4.5 Race Equipment

1 starting flag.

1 stopwatch for the Starter.

A 1 minute clock clearly visible for pilots and callers, and preferably also for the timekeepers, for indication of the one-minute engine start period.

Flags or some other means of identifying the individual prior to the race at the starting position and at the timekeepers’ and pylon judges’ positions.

A system to provide the competitors with information of the number of laps flown and which can be easily identified by the teams and the spectators.

3 sets of pylon cut indicators, clearly visible for competitors and the Starter, and preferably also for timekeepers, pylon and sideline judges.

F3E.A4.6 Time-keeping and Judging

3 stopwatches + 2 reserve stopwatches registering at least 1/100 sec.

3 manually operated lap counters + 2 reserve lap counters.

Score sheets.

The complete time-keeping, lap counting and judging equipment may be replaced by a computer-based electronic system with multiple displays as have been used in the 2003
F3E.A4.7 Secretariat

The Secretariat should be housed in a building or caravan, but preferably not in a tent.

Computer with scoring program and printing equipment or electronic calculators.

Spare stopwatches.

Scoreboard with felt pens or means of displaying the competition results to the competitors and the public.

Valid Sporting Code for the year in question.

Rules displayed in the FAI language (English) and in the national language.
ANNEX F3E.A5
GUIDELINES FOR THE DRAW FOR RACES

F3E.A.5.1 OBJECTIVE

a) This Guide is intended to specify guidelines for the organisation of F3E international contests, for the benefit of both the organisers and the competitors. It is emphasised that these are recommendations and they do not have the same status as the binding regulations in the FAI Sporting Code unless they concern any regulation in that Code.

b) Since this Guide will be widely distributed and should be regarded as the standard for F3E international competitions, organisers should avoid confusion by announcing in advance any changes from this Guide that may be necessary to suit local circumstances as long as those changes are not in contravention of the any of the regulations in the Sporting Code.

c) This Guide is primarily applicable to World and Continental Championships, but parts of it may be useful for open international competitions.

F3E.A.5.2 The main principles of the draw are specified in CIAM General Rules C.16.2.6.

F3E.A.5.3 The draw has to take into account that a pilot or caller may act as a caller in more than one race team.

It is convenient if a computer program is used to make the random draw, taking into account, in this order:

(a) The required frequency distance of 20 kHz.

(b) That one person may act in two national race teams. In case this cannot be avoided in a specific heat, a pilot may be permitted to use a different caller for that heat, but only if that caller has been registered as part of that national team before the competition began.

(c) That a heat should comprise different nationalities in one heat (unless impossible).

(d) The maximum of difference in the composition of the heats. This means that a competitor will have the technically maximum number of other pilots he flies with in the competition. The NMPRA matrix computer-aided system provides such a draw.

(e) That a single or two-up heat gives a certain advantage to a competitor; therefore single or two-up heats should be kept to a minimum and equally distributed amongst the competitors. The system of draw shall have sufficient flexibility to fill up races with reflights, so that a minimum number of single or two-up races need be flown.

(f) If the number of competitors is not divisible by 3, then the draw needs to be made in such a way that, the last race will have one or two open places. Reflights can be used as a fill in as long as frequencies allow this. If the last race is a single race and there are no reflights to fill up, then the last two races shall be flown as two-up races.

(g) A reasonable time between heats has to be allowed for each competitor.

F3E.A.5.4 The complete draw (except modifications due to reflights) shall be done before the competition starts (CIAM General Rules C.16.2.6). If the Contest Director has reasons to make substantial changes in the draw, this shall be reported in a team managers’ meeting.
ANNEX F3E.A6
GUIDELINES FOR PRACTICE FLYING

F3E.A.6.1 OBJECTIVE

a) This Guide is intended to specify guidelines for the organisation of F3E international contests, for the benefit of both the organisers and the competitors. It is emphasised that these are recommendations and they do not have the same status as the binding regulations in the FAI Sporting Code unless they concern any regulation in that Code.

b) Since this Guide will be widely distributed and should be regarded as the standard for F3E international competitions, organisers should avoid confusion by announcing in advance any changes from this Guide that may be necessary to suit local circumstances as long as those changes are not in contravention of any of the regulations in the Sporting Code.

c) This Guide is primarily applicable to World and Continental Championships, but parts of it may be useful for open international competitions.

F3E.A.6.2 In accordance with CIAM General Rules C.16.1, a practice day prior to the competition must be scheduled. During any practice, no more than four aircraft and eight or sometimes nine people (pilots, callers plus, sometimes, the practice Safety Officer) may be on the race course for safety reasons. Two aircraft may be in the air at any given time.

F3E.A.6.3 It is strongly recommended, that unofficial practice sessions are supervised by the Safety Officer.

F3E.A.6.4 This officer may apply a system for assigning practice flights to assure a fair distribution of the available practice time to all pilots present. He can do this by using a list where the pilot can add his name. Only after the pilot has returned from his practice flight may he add his name again at the end of the list.

F3E.A.6.5 The Safety Officer will ensure that not more, but preferably not less, than 4 pilots and 4 callers go on the race course at the same time to speed up the rate of practice flying. He shall permit only two aircraft to be in the air at the same time.

See also F3E A.6.3
ANNEX F3E A7
GUIDELINES FOR ORGANISERS

F3E.A.7.1 OBJECTIVE

a) This Guide is intended to specify guidelines for the organisation of F3E international contests, for the benefit of both the organisers and the competitors. It is emphasised that these are recommendations and they do not have the same status as the binding regulations in the FAI Sporting Code unless they concern any regulation in that Code.

b) Since this Guide will be widely distributed and should be regarded as the standard for F3E international competitions, organisers should avoid confusion by announcing in advance any changes from this Guide that may be necessary to suit local circumstances as long as those changes are not in contravention of the any of the regulations in the Sporting Code.

c) This Guide is primarily applicable to World and Continental Championships, but parts of it may be useful for open international competitions.

F3E.A.7.2 SITE

a) For race course lay-out see 1.10; for site lay-out see Annex F3E A2.

b) Other aspects affecting the suitability of a site include (not in order of priority):
   a) The ease of access for competitors arriving by road, public transport or international ports and airports.
   b) The availability of adequate official accommodation for all competitors, team managers, officials, and at least some supporters and helpers.
   c) The time taken to travel between this official accommodation and the flying site (ideally this should be less than 30 minutes in normal (for the area) traffic conditions).
   d) The availability of local hotels and camp sites for additional supporters.
   e) The possibility of parking vehicles at the flying site.
   f) Local practice facilities if the flying site is unavailable prior to the start of official practice.
   g) The organiser must survey the site of any competition scheduled to be held in order to determine possible cases of radio interference that would affect any competitors. Any such possibilities must be reported as early as practicable to CIAM and the National Airsport Controls (NACs). Frequency bands or specific frequencies which have been shown to be reasonably free from interference at the site of the competition need also be reported.

c) When proposing a site in a Championships bid to CIAM, the National Airsport Control must give a detailed description of all the aspects discussed above.

d) It should be arranged for a CIAM representative from another country to visit the flying site and facilities (preferably at the same time of year as the Championships are scheduled to be held). This person may be a member of the CIAM Bureau, the Chairman or a member of the F3 Pylon Racing Subcommittee, a CIAM Delegate, or a member of the FAI Jury at a recent F3D/E Championship. In the case of CIAM Delegates or CIAM Bureau members, the chosen representative should have recent F3E knowledge. The CIAM representative should discuss the site with internationally known and respected modellers who fly the F3E class and may have regularly used the proposed site.

e) The accommodation facilities must be described and the entry fee stated, split into an obligatory part and a part for food and accommodation (CIAM General Rules C.15.5). These fees should be justified to CIAM by including an estimated income and expenditure budget for the Championship (CIAM General Rules C.15.4).

f) CIAM should be given a detailed summary of weather conditions at the time and place of the proposed event, compiled by the official meteorological organisation of the host country and covering such aspects as the wind speed and direction throughout the day, the range of temperatures, sunshine and rainfall. Note that the decision on a submission of a bid to host a Championship is normally decided at the CIAM Plenary Meeting two years in advance of the event (CIAM General Rules C.15.3).
g) Well in advance of the event, **but not before agreement at the CIAM Bureau meeting in the November/December prior to the championship**, information (Bulletin 1) should be sent by the organisers to the FAI office with a request for distribution to the National Airsport Controls and members of the CIAM Bureau. Bulletin 1 should be sent by the Organisers direct to the FAI Jury of that Championship. The information should include a description of the site and any special features, with maps showing the location of the flying field, the accommodation and arrival registration point relative to roads and local towns plus a detailed map of the flying field with its entrances and any restricted access areas.

**F3E.A.7.3 PRACTICE** *(CIAM General Rules C.16.1)*

a) The fact that some teams prefer to arrive several days in advance for practice flying should be taken into account. It is highly recommended that the competition site or any suitable area in the neighbourhood is open for practice flying.

b) During the contest it should be possible to perform practice flights on the competition site contest area or on another suitable place close to it. Whenever the site is not used for the competition rounds, the competition site should be open for test flights under the supervision of the Safety Officer.

c) See also Annex F3E A6.

**F3E.A.7.4 TIMETABLE**

a) The time of year for the contest should be chosen so that the flying conditions, temperature and weather may be expected to be agreeable for the majority of competitors.

b) It is highly desirable that two unofficial practice days in addition to the official practice day is provided before the competition begins.

c) A suggested schedule for World and Continental Championships is as follows:

(i) Before the official day of registration, 1 – 3 days of unofficial practice, controlled by an officer to ensure safe flying and fair use of the race course (See also Annexes F3E A2 and F3E A6). This practice should be used to train the pylon judges, the sideline judges (to attain consensus over criteria for judgement of dangerous or erratic flying) and the timekeepers. These practice days should also be used to bring the flying site into full operation, which may cause the unofficial or free practice to be interrupted.

(ii) The first official day of championships is for arrival and registration of the teams by the team managers. On this day unofficial practice may be continued. The location of the registration office should signposted and also be indicated on a map included in one of the bulletins. At registration the team manager should be given all relevant information for his team members, such as competitors' numbers, ID cards, meal tickets, banquet tickets, accommodation details & maps, schedules including the team slots for processing and official practice, lists of participants and souvenir bags and any other information that may be available.

(iii) The second day is for official practice and model aircraft processing. During the official practice it is recommended that the full race organisation, including all officials, all racing and timing equipment is present and in use. The Starter and Safety Officer will be in charge of the safety of the official practice session. The official practice schedule showing the team slots will facilitate the smooth running of the official practice.

(iv) 3 days of competition then follow, with 3 – 6 rounds per day, with the closing ceremony and banquet on the last day.

(v) It is recommended that the number of rounds for a World or European Championship should not be more than 15. For international competitions the number of rounds should be not less than 6. The number of rounds shall be announced by the organiser at the team managers’ meeting before the start of the competition. If weather conditions or other reasons require a reduction in the number of rounds per day, then an extra day of competition may be added or a team manager meeting will be held to agree the reduced number of rounds. Such a decision has to be taken as early as possible, but with a minimum of five more rounds still to be flown after the decision, since a late decision may affect the fairness of the competition.
vi) The published timetable should include the expected start & finish times of the rounds. As well as the schedule for flying, the timetable should also include the time and place of:
- the meeting of the organisers with the team managers (known as the team managers meeting) after arrival:
- the opening ceremony, at a time not infringing upon model aircraft processing or practice periods;
- the ceremony for the presentation of FAI or CIAM medals, appropriate trophies, FAI diplomas and any organiser trophies to the winners.

(vii) Copies of the timetable included in a Bulletin (distributed at least 2 months in advance in the process outlined in F3E.A6.2.g)) should be supplied as hand-outs via the team manager, to all participants upon arrival at the event.

F3E.A.7.5 TEAM MANAGERS MEETINGS
a) Usually on the evening of the official registration there will be a meeting of the team managers with the organisers, the FAI Jury and the Judges with the following (minimum) agenda:
   i) Welcome of teams by the Contest Director.
   ii) Introduction of FAI Jury, Starter, Judges and other officials.
   iii) Urgent problems involving lodgings, transport or feeding of competitors
   iv) Draw for the flying order.
   v) Local rules.
   vi) Comments from the FAI Jury President on any new rules or flight procedures that the Jury feels should be emphasised.
   vii) Comments from other Judges or Jury members about interpretation of rules or general competition procedure
   viii) Time table
   ix Questions from team managers.

b) At the request of the FAI Jury, the organiser or at least three team managers, additional team managers meetings may be held as requested or in the evening before each competition day.

F3E.A.7.6 INTERPRETERS
It is advisable that interpreters are available at all stages of World and Continental Championships to allow communication between the main officials, team managers and the FAI Jury. An essential minimum is to ensure that these three categories of personnel are able to communicate with each other in English or the second official language specified for the Championships. The smooth running of the event is aided by also supplying interpreters for teams who are unable to converse in either of the official languages.

F3E.A.7.7 CEREMONIES
a) It is desirable to keep all ceremonies short and readily understood.

b) Opening Ceremony
   i) The key elements of an opening ceremony are the introduction of the teams and welcoming remarks by the organisers and the President of the FAI Jury. Depending on the number of teams it may not be desirable to play the anthem of each country. If requested to do so, the team managers should have brought recordings of their national anthem. For any country that does not bring an anthem and for competitors from countries that are only temporary members of the FAI, then the FAI anthem should be played.
   ii) At the beginning of the opening ceremony, as soon as the teams are in their places, the FAI anthem is played and the FAI flag raised. At the end of the ceremony, the President of the FAI Jury will declare the Championship open, and the national anthem of the organising country is played.

c) Awards Ceremony (CIAM General Rules C.15.7)
i) The award ceremony should be separate from any closing banquet, so that it may be attended by all participants regardless of whether or not they attend the banquet.

ii) The key preparation for the prize giving is to have all the trophies, medals and diplomas available for presentation, with the diplomas completed with the winners’ names.

iii) There should be a rostrum or other central area or stage for presentations to the individual and team winners which allows suitable views for photographers.

d) Closing Ceremony

i) The award ceremony is followed by the closing ceremony which will include closing remarks by the organisers and the President of the FAI Jury.

ii) At the end of this ceremony, the FAI anthem is played, and the FAI flag presented, as a symbol, to the team manager or representative of the next organising country.

e) Closing Banquet

In planning any closing banquet it should be remembered that the main enjoyment of participants is meeting one another and talking together. To assist in this, it is not desirable to provide major special performers or speeches or loud music for the dinner.

F3E.A.7.8 PROCEDURES FOR MODEL AIRCRAFT PROCESSING

a) Model aircraft processing must be carried out according to CIAM General Rules C.10, C.11 & C.12.

b) There are three phases to processing:

   first phase  - before the competition begins;
   second phase - random checks during the competition;
   third phase  - after the provisional results.

c) First phase processing – before the competition begins:

   Checks for:
   Specification certificate
   Wing, tail & surface areas
   Wingspan
   Weight of model aircraft incl battery
   Fail-safe
   Check the Olympic identification mark
   Check the model aircraft identification code
   Check the FAI sticker

Notes:

i) Confirmation of the FAI sticker check should be shown by marking across the edge of the sticker and the model aircraft with an indelible special symbol or stamp of the organisation. If a stamp is used it is essential that it is with permanent ink which does not wipe off under the effect of rain, model aircraft fuel or lubricants.

ii) The identifying letters or number (unique code) on the models of each competitor should be identified in each race and recorded with the race times for that competitor. Note that if a competitor is from a country that is a temporary member of the FAI, then on all entry, flying and results listings, “FAI” should be used as his three-character identification mark and not those of his nation.

d) To facilitate the smooth running of the first phase processing, a schedule should be established with equal slots for each competitor.

e) If a competitor wishes to register a further model aircraft, then he must present to the organiser the corresponding specification certificate for the new model aircraft. The time and place for any additional model aircraft checking that a competitor may request should be clearly communicated via the team managers.

f) Second phase: random checking of models during the competition.
i) The models to be checked should be chosen at random and it should be done in such a manner so as not to inconvenience or hinder competitors. Models should be impounded immediately after a flight and should be checked as soon as possible thereafter. The results of these checks should be recorded. Advance notice of the check should not be given.

ii) Note that these checks are in addition to the model aircraft identification checks that the Technical Officer makes before each flight.

g) Third & final phase - after the provisional results

i) For the check of the characteristics of all the model aircraft used by the competitors placing first, second and third, it is prudent to impound at least the fourth place model aircraft as well, for processing in the case of any disqualification in the first three.

ii) It may be that the re-checking can be carried out at the flying site if good facilities are available there for accurate measurements, otherwise the models should be impounded at the flying site and taken to an alternative site for processing. In this case the pilot may accompany his model aircraft as long as he is not, at any time, left unattended with the model aircraft.

iii) Check of the Energy limiter, and battery properties.
