Re: ISC Injury Assessment and Medical **Evaluation** Forms

Dear Gillian,

The Medico-physiological Commission (CIMP) met (online) this past Sunday and the full CIMP bureau was on hand to review, discuss and subsequently to endorse the implementation of the ISC Injury Assessment and Medical Evaluation Forms as proposed by ISC Technical & Safety Committee and presented by member Stephan Kramer.

The forms are suited for use by persons without any medical background and should allow for early identification of athletes in need of further medical attention.

We would be grateful to be included in a follow up and debriefing after implementation. CIMP will adhere to all medical confidentiality requirements and would kindly request that we be sent all submitted forms (both positive and negative assessments). If necessary, names can be deleted. The approximate age of the individuals would be of interest, however, for subsequent statistical analysis. CIMP recommends that the protocol developed by ISC Technical & Safety Committee be adopted for subsequent use at ISC competitions and events.

Sincerely,

Thomas

Thomas Drekonja, MD

CIPM President Medico-physiological Commission
