RIGHTS TO FAI INTERNATIONAL SPORTING EVENTS

All international sporting events organized wholly or partly under the rules of the Fédération Aéronautique Internationale (FAI) Sporting Code¹ are termed *FAI International Sporting Events*². Under the FAI Statutes³, FAI owns and controls all rights relating to FAI International Sporting Events. FAI Members⁴ shall, within their national territories⁵, enforce FAI ownership of FAI International Sporting Events and require them to be registered in the FAI Sporting Calendar⁶.

An event organiser who wishes to exploit rights to any commercial activity at such events shall seek prior agreement with FAI. The rights owned by FAI which may, by agreement, be transferred to event organisers include, but are not limited to advertising at or for FAI events, use of the event name or logo for merchandising purposes and use of any sound, image, program and/or data, whether recorded electronically or otherwise or transmitted in real time. This includes specifically all rights to the use of any material, electronic or other, including software that forms part of any method or system for judging, scoring, performance evaluation or information utilised in any FAI International Sporting Event⁷.

Each FAI Air Sport Commission⁸ may negotiate agreements, with FAI Members or other entities authorized by the appropriate FAI Member, for the transfer of all or parts of the rights to any FAI International Sporting Event (except World Air Games events⁹) in the discipline¹⁰, for which it is responsible¹¹ or waive the rights. Any such agreement or waiver, after approval by the appropriate Air Sport Commission President, shall be signed by FAI Officers¹².

Any person or legal entity that accepts responsibility for organising an FAI Sporting Event, whether or not by written agreement, in doing so also accepts the proprietary rights of FAI as stated above. Where no transfer of rights has been agreed in writing, FAI shall retain all rights to the event. Regardless of any agreement or transfer of rights, FAI shall have, free of charge for its own archival and/or promotional use, full access to any sound and/or visual images of any FAI Sporting Event. The FAI also reserves the right to arrange at its own expense for any and all parts of any event to be recorded.

THIS 2023 EDITION INCLUDES THE FOLLOWING AMENDMENTS MADE TO THE 2022 VOLUME

These amendments are marked by a double line in the right margin of this edition

Paragraph	Date of change	Brief description of change	Change incorporated by
A. Drone Racing World Cup rules	Changes effective 1 st January 2023		Bruno Delor S/C Chairman
A.2.2. Masters World Cup Series		CIAM being now entirely responsible of Drone Sports, CIAM Bureau is the appropriate body to select the Masters events.	
A.3. Participants		Change to allow more flexibility for participation in Masters events.	
A.5. Classification		Correction to be coherent with the change introduced in the 2022 edition.	
A.9. Responsibilities of the event organiser		CIAM form is no more the reference for registration of the events which is now done with the AMS.	
A.10. World Cup Board		Clarification of the wording;	
B. F9A rules			
B.1. Drone ball general specifications		Removal of the 1 % tolerance for inaccuracy of the measurements devices.	
B1.2. Motorization		For F9A-B subclass, 3S extended to 4S.	
B1.4. Radio control (RC) equipment		Clarification of the wording.	
B.1.5. LED light device		Clarification of the wording.	
B.3.1. Shape and dimensions		Simplification for F9A-B to improve accessibility of this subclass.	
B.3.4. Detection sensor		To allow sensor technology development and to coincide with B.8.4.	
B.4.1. Active players		Clarification of the team captain role during the active play.	
B.8.4 Scoring		Clarification in order to facilitate the scoring of a goal.	
B.8.5. Safety occurrence		Clarification of the situation of a drone ball no more in situation to fly in safe condition.	
B.9. Penalties		Introduction of the possibilities to stage the penalty shots(s) at the end of the set.	
B.9.3. Yellow card & B.9.4. Red card		Change in order to punish a player instead the complete team.	
B.11. Disqualification from the event		Clarification of the wording.	
B.12.1. Event director		Clarification of the wording.	
B.12.3. Jury		Correction for a FAI event and coverage of an event not included in the FAI Contest Calendar.	
C. F9U rules			
C.1. General specifications for models		Removal of the 1% tolerance for inaccuracy of the measurements devices.	
C.1.2. Motorization		Removal of the note considering with the experience it does not look necessary to consider a maximum amount of energy which may be used for the race.	
C.1.4. Radio control (RC) equipment		Simplification of the wording (not necessary to refer to the CIAM General Rules).	
C.1.5. Video system		Clarification of the wording for the DVR to avoid restriction for the choice of a recording equipment by the organiser. Mention of the possibility to allow analog and digital video devices in the same race. Specification for the digital video devices of a maximum 25 mW power emission and 25 Mbps. Simplification of the wording (not necessary to refer to the CIAM General Rules).	
C.1.6. LED light device (Optional)		Mention of the possibility for the organiser to define a list of authorised LED light devices with removal of recommended specifications.	
C.3. Number of models		Limitation of the possibility to change a model for a race.	
C.4. Model registration and processing		Limitation of the possibility to register an additional model. Clarification of the wording.	
C.5. Practice flights		Limitation to one one mandatory practice/warm up.	
C.6 Event organisation	Removal of the reference to reflights for elimination and final stages.		
C.6.1. Timekeeping	Mention in that paragraph of all provisions concerning timekeeping.		

C.6.2 Procedure for the start of the race	Changes effective 1 st January 2023	Limitation of the situations in which the start must be stopped.	Bruno Delor S/C Chairman
C.6.3 Qualification stage		Clarification of the wording.	
C.6.5. Final stage		Replacement of the actual optional way to proceed which is too much sophisticated and difficult to understand.	
C.6.6. Additional rounds optional sequence		Clarification of the wording due in particular to the introduction of a race director.	
C.7.2. Faults and penalties		Simplification of the the wording and removal of the possibility of a reflight for a pilot whose model had been collided into.	
C.7.3. Disqualification from the race		Clarification of the wording.	
C.7.4. Crash		Clarification of the wording.	
C.7.5. Safety occurrence		Consideration of serious safety issue circumstances. Clarification of the wording.	
C.8. Reflights		Individual reflights restricted to the qualification stage.	
C.9.1. Jury		Correction for a FAI event and coverage of an event not included in the FAI Contest Calendar.	
C.9.2. Officials to run the event		Addition of a race director.	
C.9.3 Judges		Removal of the obligation of judges assigned to the pilots. Clarification of the wording.	
C.10. Interruption of the event		Clarification due to the introduction of a race director.	
C.11. Competitors information	Clarification of the wording.		

Four-Year Rolling Amendments for Reference

Paragraph	Date of change	Brief description of change	Change incorporated by
A. Drone Racing World Cup rules	Changes effective 1 st March 2022		Bruno Delor S/C Chairman
A.5. Classification		Sum of the best 3 (instead 4) event results considered for the World Cup competitors' score.	

Four-Year Rolling Amendments for Reference

Paragraph	Date of change	Brief description of change	Change incorporated by
B. F9A rules	Changes effective 1 st January 2021		Bruno Delor S/C Chairman
B.1.1. Weight and size		Subclass F9A-B: Weight of the drone ball increased to 300 g (instead 200 g actually).	

Four-Year Rolling Amendments for Reference

Paragraph	Date of change	Brief description of change	Change incorporated by
B. F9A rules	Changes effective 1 st January 2020		Bruno Delor S/C Chairman
B.1.1. Weight and size		Introduction of two subclasses: F9A-A (400 mm diameter) and F9A-B (200 mm diameter). For 400 mm drone balls (F9A-A subclass), maximal weight increased to 1.2 kg considering weight of the drone balls actually available on the market. For 200 mm drone balls (F9A-B subclass), maximal weight of 200 g.	
B.1.2. Motorization		Possibility of a maximum 6S battery pack in subclass F9A-A, and 3S in subclass F9A-B. Voltage of each cell of the battery pack limited to 4.25 V (safety reason).	
B.1.3. Propellers		For subclass F9A-B, 3 inches as maximum diameter of the propellers.	
B.1.5. LED light device		Mention of the number of LEDs recommended for the F9A-B subclass.	
B.2.2. Flying zone		For subclass F9A-B, possibility to consider smaller dimensions for the flying zone with 6 m x 3 m minimum.	

B.3.1. Shape and dimensions	Changes effective 1 st January 2020	For subclass F9A-B, possibility to consider a smaller internal diameter of the goal ring.	Bruno Delor S/C Chairman
B.9.1. Penalty shot		Mention how a penalty shot must be executed.	
C. F9U rules			
C.1.2. Motorization		Voltage of each cell of the battery pack limited to 4.25 V (safety reason).	
C.1.3. Propellers		Removal of the sentence: 'Any propeller protection device is forbidden'. Based on safety consideration, there is no reason to prohibit such a protection device.	
C.1.4. Radio control (RC) equipment		Limitation of the 868 MHz / 915 MHz modules output power.	
C.6. Event organisation		Clarification of the possibility to organize the event with only one stage based a fixed number of rounds when the total number of competitors is low. Clarification concerning number of pilots per group.	
C.6.2. Procedure for the start of the race		Clarification of the wording considering sentence 'Pilots, arm your quads', may be announced by the starter or automatically.	
C.6.3. Qualification stage		Clarification how to proceed for the draw of the qualifying rounds. Fastest time to complete a required number of laps qualification method not recommended when only three qualifying rounds or less are scheduled.	
C.6.4. Elimination stage		Clarification how to proceed for the 1 st elimination round when the number of competitors is lower than the number of competitors required for the considered scenario.	
C.6.5. Final stage		When the double elimination sequence is not applied, possibility to consider 3 final flights with allocation of points instead a single final flight. When the double elimination sequence is applied, clarification on how to proceed for the final stage.	
C.6.6. Additional rounds optional sequence		Flexibility given to the organiser for the additional rounds with possibility to have successive eliminating rounds as proceeded for the elimination stage, or a fixed number of rounds for all concerned competitors.	
Annexes C.2 to C.4	Modification of the composition of the races for the 1 st elimination round. Clarification how to proceed for the final classification when the optional additional rounds sequence is applied.		

Four-Year Rolling Amendments for Reference

Paragraph	Date of change	Brief description of change	Change incorporated by
B. F9A rules	Changes effective 1 st May 2019	Introduction of the F9A provisional class (Drone Soccer) rules (Chapter B). Consequently, chapter B has been renumbered C and Annexes 1 to 4 have been renumbered C.1 to C.4.	Bruno Delor S/C Chairman
A. Drone Racing World Cup rules	Changes effective 1 st January 2019	'Volume F3 Radio Control Drone Racing' renamed 'Volume F9 Drone Sport'. Class F3U renumbered F9U (name unchanged).	Bruno Delor S/C Chairman
B. F9U rules		Replacement of 'F3U' by 'F9U'. Replacement of 'contest' by 'event'. Adaptation of the World Cup rules to take in account the new World Cup format with Challenger and Masters World Cup Series. About requirement of competitors from at least two different countries for points allocation in a World Cup event, mention that every time zone will be considered as equivalent to a country for a country which extends over more than three time zones.	
B.1.1. Weight and size		Replacement of 'F3U' by 'F9U'. Mention that the necessary information must be available at least one month before the event (instead well before the event).	
B.1.2. Motorization		Clarification of the wording for the size specification. Possibility to use 6S batteries with increase to 25.5 volts of the maximum voltage of the battery.	
B.1.4. Radio Control (RC) equipment		Mention that the organiser may define a list of authorized equipments and of the possible penalty in case of use of non-authorized RC equipment.	
B.1.5. Video system		Recommendation of a digital video recorder (DVR). Mention that the video system must be set with 25 mW maximum power emission. Mention of the possible penalty in case of non-authorized activation of a video transmitter.	

B.1.6. LED light device (Optional)	Changes effective 1 st January 2019	'Unit' replaced by 'device'. Mention of recommended specifications for the optional LED light device.	Bruno Delor S/C Chairman
B.1.7. Identification marks		Removal of possibility to mention the National FAI Licence number instead the FAI ID number (from 2022). Mention that the identification mark must be in a clearly visible position.	
B.2. Racing circuit		Rewording of the specifications.	
B..3 Number of models		Clarification of the wording.	
B.4. Model registration and processing		Clarification of the wording.	
B.6. Event organisation (Introduction part)		Recommendation of 4 pilots maximum per group, except for qualifying and/or optional additional rounds which may be run with 6 pilots per group.	
B.6.1. Timekeeping		Requirement of an electronic timing system (instead manual timekeeping) with an appropriate redundancy.	
B.6.2. Procedure for the start of the race		Clarification about the start procedure and the role of the starter.	
B.6.3. Qualification stage		Flexibility given to the organiser for the choice of the qualification method.	
B.6.4. Elimination stage		Removal of the scenarios D and E with 6 pilots per group. Replacement of the double chance optional sequence by the double elimination optional sequence giving possibility to reach the final.	
B.6.5. Second Chance flight (Optional sequence)		Removal of this paragraph considering the new double elimination optional sequence is a part of the elimination stage (B.6.4). Consequently, sub-paragraph B.6.7 relative to additional rounds sequence is renumbered B.6.6.	
B.6.6. Additional rounds optional sequence		Clarification of the additional rounds sequence modalities.	
B.6.7 Final classification		Mention in this new sub-paragraph of the cross-references to the final classification tables included in annexes 2 to 4.	
B.7.1. Obstacle damaged or destroyed during the race		Mention in this new sub-paragraph how to proceed when an obstacle is damaged or destroyed during the race.	
B.7.2. Faults and penalties		Removal of the time penalties possibility considering it may be introduced as a local rule when the indoor circuit justifies it.	
B.7.3. Disqualification from the race		Clarification of the wording.	
B.7.4. Crash		Mention that the pilot must clearly say when he stops to fly after a crash.	
B.7.5. Safety occurrence		Mention in this new sub-paragraph of possibility to request a pilot to the flight if it is considered the model no longer meets acceptable safety standards.	
B.8. Classification		Removal of this paragraph considering final classification information has been placed in sub-paragraph B.6.7.	
B.8. Reflights		Introduction of a new paragraph for reflights in order to better detail causes for reflights and organisation of the reflights for the different stages of the event. Consequently, sub-paragraphs B.7.4 Video issues and B.7.5 Reflight have been included in this new paragraph. Clarification of the wording.	
B.9.1. Officials needed to run the event	Rewording of some parts of the sub-paragraph.		
B.9.3. Judges	Flexibility given to the organiser concerning position of the judges and clarification of their role.		
B.10. Interruption of the event	Clarification of the circumstances for which the event should be interrupted or the start delayed.		
Annex 1	Rewording of the recommendations regarding racing circuit.		
Annexes 2 to 4	Introduction of templates for each scenario (A, B and C).		

RULE FREEZE FOR THIS VOLUME

Regarding the provisional statute of the F9A and F9U classes, the content of this Volume is not subject to Plenary Meeting approval, nor is it restricted by any rule freeze regulation.

It is under the direct control of CIAM Bureau and may be updated at any time during the year.

A. DRONE RACING WORLD CUP RULES

A.1. CLASS

The FAI provisional class F9U is recognised for the Drone Racing World Cup.

A.2. EVENTS

The Drone Racing World Cup is based on two series of events: Challenger and Masters.

All Drone Racing World Cup events will be considered as Second Category events as defined in FAI Sporting Code General Section.

Those events will be published on the FAI Calendar and must be run according to the FAI Sporting Code.

A.2.1. Challenger World Cup Series

Only Open International events may be considered for the Challenger World Cup Series.

The selection of the events for the Challenger World Cup Series is done by the Drone Sport Subcommittee Chairman. Wherever possible, the selection for a particular year will be done before the end of the preceding year. In duly justified cases, an event can be added after this date at the discretion of the Drone Sport Subcommittee Chairman.

A maximum of two events may be selected for any country on its own behalf unless the country extends over more than three time zones; in that case, one event may be selected within each time zone of the country with a maximum of four events for the country on its own behalf.

A country may choose to run a Challenger World Cup event at a venue in another country provided that the registration of the event on the FAI calendar is submitted by the organising country and the name of the organising country is included in the title of the event. Any country may host one event maximum on behalf of another organising country regardless of whether or not the host country extends over more than three time zones.

A.2.2. Masters World Cup Series

The selection of the events for the Masters World Cup Series will be done by the CIAM Bureau. ||

Wherever possible, the selection for a particular year as Masters World Cup event will be done before the end of the preceding year.

A.3. PARTICIPANTS

Any person holding a valid FAI Sporting Licence or FAI Drone Permission may participate in a World Cup event and so be eligible for the World Cup ranking. ||

Participation in the Masters World Cup events may be restricted to qualified competitors considering the current World Cup ranking. The current World Cup ranking will be based on a sliding 12 months period. ||

A.4. POINTS ALLOCATION

In any event, points for the World Cup will only be allocated if the competitors have flown from at least two different countries. For a country which extends over more than three time zones, every time zone will be considered as equivalent to a country.

Points allocated to each competitor depend of the placing in the event of the concerned competitor.

In the situation of a tie for any placing, the competitors with that placing will share the points which would have been awarded to the places covered had the tie been resolved (round up the score to the nearest whole number of points).

The points allocated to competitors will depend on the number (N) of competitors who have effectively flown in the event.

Points are allocated as follows to the competitors who have effectively flown in the event.

a) N > 40

Placing	1	2	3	4	5	6	40 and after
Points	40	39	38	37	36	35	1

b) N = 40 or N < 40

Placing	1	2	3	4	5	6	N-1	N
Points	N	N-1	N-2	N-3	N-4	N-5	2	1

In addition, bonus in points will be awarded for the best placed competitors.

For any Challenger World Cup event, bonus in points is awarded to the three best placed competitors as follows:

- 1st place = $N/5$ rounded up to the nearest whole number with a maximum of 8 points.
- 2nd place = $N/8$ rounded up to the nearest whole number with a maximum of 5 points.
- 3rd place = $N/13$ rounded up to the nearest whole number with a maximum of 3 points.

For a Masters World Cup event, bonus in points is awarded to the eight best placed competitors as follows:

- 1st place = $N/2,5$ rounded up to the nearest whole number with a maximum of 16 points.
- 2nd place = $N/3$ rounded up to the nearest whole number with a maximum of 14 points.
- 3rd place = $N/3,5$ rounded up to the nearest whole number with a maximum of 12 points.
- 4th place = $N/4$ rounded up to the nearest whole number with a maximum of 10 points.
- 5th place = $N/5$ rounded up to the nearest whole number with a maximum of 8 points.
- 6th place = $N/7$ rounded up to the nearest whole number with a maximum of 6 points.
- 7th place = $N/10$ rounded up to the nearest whole number with a maximum of 4 points.
- 8th place = $N/20$ rounded up to the nearest whole number with a maximum of 2 points.

A.5. CLASSIFICATION

The World Cup results are determined by considering the points obtained by each competitor in the World Cup events.

For each competitor, only one World Cup event result per organising country may be considered for the World Cup placing (better number of points for any organising country in which the competitor has scored in two events). For a country which extends over more than three time zones, one event may be counted for this organising country within each time zone of the country.

The total World Cup score of the competitor is the sum of his(her) best three event results (numbers of points) for all World Cup events (Challenger and Masters).

The winner of the World Cup is the competitor with the greatest total score for the concerned year, and so on for the placing.

In the situation of a tie for first, second or third place, placing will be determined by taking in account for the competitors in question, their best fourth result, then if necessary, their fifth best result, and so on. If this does not separate the tied competitors, then the placing will be determined by considering the sum of the points that they obtained in each of the three events considered for their World Cup score multiplied by the number of competitors who have flown in the event concerned; the winner is the one with the greatest total thus calculated.

A.6. AWARDS

The winner is awarded the title of World Cup winner for the concerned calendar year.

Medals, trophies, prizes, or certificates may also be awarded as available.

A.7. ORGANISATION

Administration, collection of the results, calculation of the placing and regular publication of the current World Cup positions are normally done by the Drone Sport Subcommittee Chairman.

A dedicated World Cup Coordinator may be nominated. Such a nomination is done by the CIAM

Bureau on proposition of the Drone Sport Subcommittee Chairman.

A.8. COMMUNICATION

The World Cup results and placing could be distributed to the news agencies and also be available, by payment of a subscription, to any interested bodies or individuals.

Final results of the World Cup must be sent also to the CIAM with the annual report to be done by the World Cup Coordinator.

A.9. RESPONSIBILITIES OF THE EVENT ORGANISER

The organiser NAC or the event organisers will request the inclusion in the World Cup at the registration of the event in the FAI application.

The selection of the events eligible for inclusion in the World Cup will be done from those proposals as specified in paragraph A.2.1.

Immediately after the event, the organiser must send the results in electronic form to the World Cup coordinator, at least within one month as required by the CIAM rules. Any failure to return results promptly will be reviewed when considering the events for inclusion in the World Cup for the following year.

A.10. WORLD CUP BOARD

According to CIAM General Rules Volume C.7.4, a Board of three persons shall be nominated by the Drone Sport Subcommittee Chairman to rule on any issue concerning the implementation of World Cup rules during a year. Any such issue must be submitted in writing to the Subcommittee Chairman and the Board. The World Cup Board is not entitled to deal with any kind of complaint or protest concerning a single event, which must be considered by the FAI Jury for that event.

B. F9A (PROVISIONAL CLASS) - DRONE SOCCER RULES

Drone soccer is a mix between drone flying and soccer done.

A drone soccer match opposed two teams with a defined number of players flying each a drone ball over the flying zone. The match is subdivided in three periods of time, each of them being considered as a set.

The team is composed of a "striker" who is the only one who may score with its drone ball going through the opponents' goal ring. The other team's players may act as guide or defender.

B.1. DRONE BALL GENERAL SPECIFICATIONS

The drone ball must be equipped with a fail-safe device, the triggering of which stops the motors.

The following are strictly forbidden:

- Pre-programmed manoeuvring device.
- System for automatic positioning and/or path rectification in longitude, latitude or height.

Note: Software recovery modes such as 'anti Turtle' or 'anti crash' and automatic system or which can be activated by the pilot in order to level back the drone ball after a crash are permitted.

The drone balls may be checked by the organiser before the event begins.

B.1.1. Weight and size

A spherical outer protective frame shall surround the drone ball. All the components of the drone ball must be inside the spherical protective frame. Nothing must be placed outside this frame.

a) Subclass F9A-A

The total weight of the drone ball including all equipment necessary for flight (including outer frame and batteries) shall not exceed 1.2 kg.

The diameter of the frame must be $40 \text{ cm} \pm 2 \text{ cm}$.

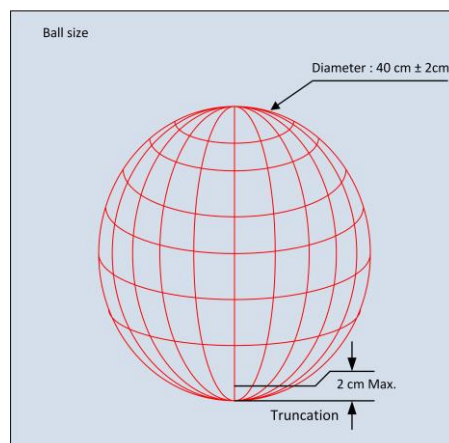

b) Subclass F9A-B

The total weight of the drone ball including all equipment necessary for flight (including outer frame and batteries) shall not exceed 300 g.

The diameter of the frame must be $20 \text{ cm} \pm 2 \text{ cm}$.

For both subclasses, the frame may be truncated 2 cm maximum on its base for stability of the drone ball on the ground. Any individual open surface of the frame must be 150 cm^2 maximum.

Note: This requirement is to prevent drone balls with a too light protective framework surrounding the drone ball. Although a lighter drone ball can offer better flying performance, too protective frames can adversely affect the game due to frequent interference and damage.

B.1.2. Motorization

Only electric motors are allowed.

The drone ball may be equipped with a maximum of four electric motors.

Battery pack up to 6S is allowed in F9A-A subclass, and 4S in F9A-B subclass.

The voltage for each cell must not exceed 4.25 V. This means a maximum voltage of 12,75 V for a 3S battery pack, 17 V for a 4S, and 25.5 volts for a 6S.

The voltage measurement will be done before the beginning of the match.

B.1.3. Propellers

Maximum diameter:

- 6 inches (15.2 cm) in F9A-A subclass.
- 3 inches (7.6 cm) in F9A-B subclass.

Full metal propellers are forbidden.

B.1.4. Radio control (RC) equipment

Every 2.4 GHz spread spectrum technology RC equipment may be used.

In order to limit risk of potential problems with unwanted interference during a match, the event director may define restrictions for use of RC systems equipment outside the playing field.

In case of a non-authorized use of a RC equipment, penalty going up to disqualification from the event of the concerned team may be imposed_(See B.11).

B.1.5. LED light device

In order that during a match, drone balls of each team could be clearly identified, each drone ball must be equipped with an LED light device that has the capability to choose from a set of different colours.

The organiser must define the specifications of the LED light device or a list of authorized devices.

Recommended specifications:

- 40 to 60 LEDs for F9A-A, and 4 to 12 LEDs for F9A-B so that the drone ball can be seen clearly from any direction.
- Colours: Blue - Green - Red - Yellow
- Possibility to easily change the colour (switch, RGB controller, ...).

B.1.6. Scorer drone ball

The drone ball of the striker (scorer drone ball) must be easily recognizable from any point on the playing field, compared to the other drone balls of the team, or of the opponent's team.

It may be obtained with a different or additional LED light device different, or with a specific tag. The organiser may define the corresponding specifications.

B.2. PLAYING FIELD

Drone soccer event may be run indoor or outdoor.

The playing field is mainly composed of a flying zone and two pilots' areas (one for each team).

B.2.1. Surface

There are no precise specifications regarding the surface of an outdoor playing field or the floor of an indoor arena or gymnasium.

Surface of an outdoor playing field must be sufficiently flat. In addition, too hard surface covering or floor, such as asphalt or concrete, should be avoided for the flying zone in order to minimize risk to damage the drone ball when it falls on the ground.

In case the surface of the flying zone is covered with a soft artificial material, the organiser will take care a drone ball cannot sink in the covering material more than about one centimetre in order to avoid take-off problem. The organiser will also check that 'spring effect' will be limited.

B.2.2. Flying zone

The flying zone shall be a rectangle marked by lines. The dimensions of the rectangle will be fourteen to twenty meters for the longer side, and seven to ten meters for the shorter one.

For subclass F9A-B, smaller dimensions for the flying zone may be considered with minimum dimensions of six meters for the longer side and three meters for the shorter one.

In any case, the length of the flying zone will be twice the width.

A centre line will be marked at the middle of the longer side of the flying zone. The centre of the flying zone (middle of the centre line) will be also marked.

There shall be no obstacle(s) on the flying zone or closed to it which may hinder the game.

Note: For indoor, height without obstacle(s) over the surface of the flying zone shall be five meters minimum in order to allow drone balls to go above the goal rings.

Two areas for start and take-off of the drone balls (one for each team) will be marked inside the flying zone. The start area will be positioned in the middle part of the baseline (shorter side of the flying zone). Length of the start area will be about half the baseline width and depth will be about (but not less) 1.5 m. Position and dimensions of the two start areas will be identical.

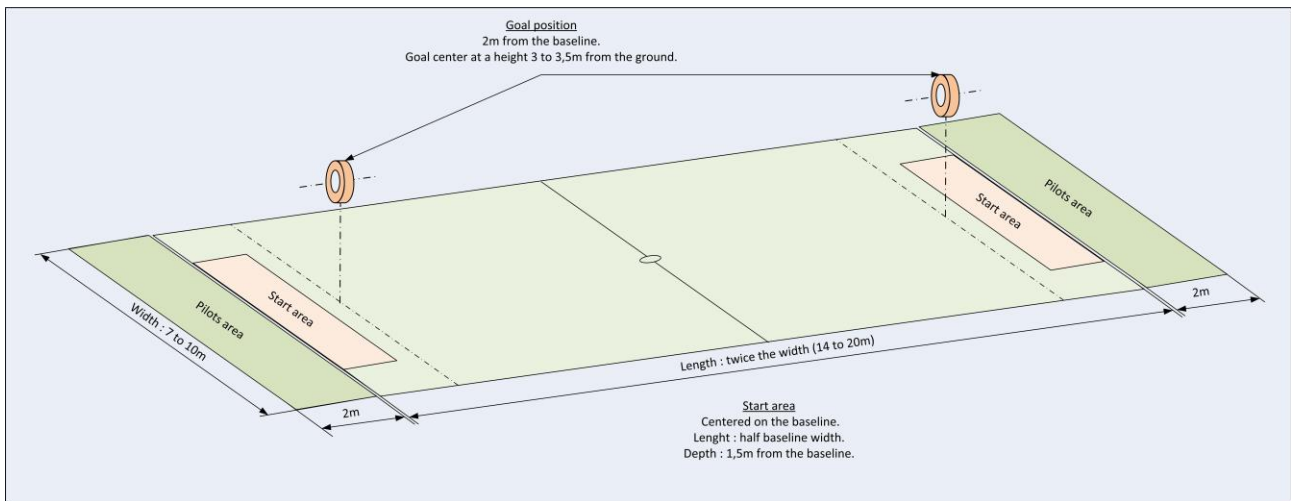

All marks on the ground will be clearly visible using a colour distinguishable from the ground surface colour.

B.2.3. Pilots' area

The pilots' areas (one for each team) will be placed outside the flying zone on the shorter sides as defined on the following scheme. Position and dimensions of the two pilots' area will be identical.

Each pilots' area will be marked.

During the sets of a match, only the players who are effectively flying (active players) may be in the pilots' area. The other members of the team (reserve players and coaches) must be outside the flying zone and the pilots' areas.

B.3. GOAL RINGS

The flying zone will be equipped with two goal rings (one for each team).

B.3.1. Shape and dimensions

The goal ring will be circular. The shape and the dimensions of the two goal rings must be identical.

Dimensions for subclass F9A-A:

- Internal diameter 60 to 80 cm.
- External diameter 100 to 120 cm.
- Thickness 20 cm minimum.

Dimensions for subclass F9A-B:

- Internal diameter 40cm.
- Goal ring may be flat up to maximum depth.

B.3.2. Position

Each goal will be positioned at about 2 m inside the baseline (shorter sides of the flying zone) at a height from the ground of 3 to 3.5 m measured from the centre of the goal ring).

The goal rings must face the centre of the flying zone. They will be fixed on posts or suspended from the ceiling taking care they cannot fall down and to avoid any swaying. It is important to ensure a firm, stable and secure fixation of the goal rings and to avoid any possibility of swaying of the goal rings.

Position of the two goal rings will be identical.

B.3.3. Material and structure

The material must be strong enough to minimize risk of a damage or deformation which may affect the game, but sufficiently flexible to avoid damages on the drone balls.

The goal ring must be visible and easily identifiable from any position around the playing field. The goal ring shall have a distinguishable colour for easy identification. It is also possible to add lighting systems on the goal rings to increase its visibility.

B.3.4. Detection sensor

For automatic scoring, a detection sensor may be installed on each goal ring subject it does not affect possibility for the drone ball to go through the goal ring.

Note: In case of an automatic scoring is used, teams shall be informed about position of the detection sensors before the match begins.

B.4. COMPOSITION OF A TEAM

The team consists of players and coaches. Unless specified differently for the event, a coach may participate as a player.

B.4.1. Active players

Drone soccer is played with a maximum of 5 active players. The organiser must precise the authorized number of active players (5, 4, 3 or 2) when announcement of the event is done. Except exceptional circumstances, this number cannot be changed during the event. In case the event is organized with different rounds, the main referee may decide (after a round is completed) to reduce the number of active players subject a majority of the teams still participating in the event agree the decision.

The organiser will also define the total number of persons authorized for a team. In any case, a maximum of 10 (ten) persons may be authorized; this maximum number must be adapted depending the authorized number of active players. The organiser may also precise a maximum number of players and/or the number of authorized dedicated coaches.

The active players include one striker (scorer). The other active players can play as guide or defender. Any active player may only control one drone ball. So, the number of drone balls in flight cannot be higher than the number of active players.

Replacement of an active player is only possible during a break between two sets and can only be considered with players mentioned on the players' list for the concerned team.

One of the active players will be appointed team captain as spokesperson to communicate with the match referee, and where applicable the assistant referees.

B.4.2. Players' list

The players' list for each team must be submitted before the beginning of the event as required by the organiser, and in any case no later than 30 minutes before the first match.

The players' list will also mention the dedicated coach(es) in order to check it complies with the total number of persons authorized for a team for the event.

The list may not be changed as soon as the event begins.

Note: Mention of the strikers and team captains on the players' list will not be requested considering they may change between two sets and for the different matches.

B.5. NUMBER OF DRONE BALLS

Each active player may have 2 (two) drone balls ready for a match. The spare drone ball cannot be equipped with a pack of batteries when it is not used for flight.

The player may only change the drone ball or the pack of batteries during the break between two sets.

B.6. PRACTICE FLIGHTS

Practice sessions may be organized. The event director has the responsibility to define the conditions of the practice sessions.

Flights other than those authorized by the organiser are strictly forbidden under threat for the team to be disqualified from the event.

B.7. FORMAT OF THE EVENT

The organiser defines the event format. The format must be announced as soon as possible and at least one month before the event.

There are two main types of formats which may be considered:

- Group stage followed by knockout and final stages.
- Successive rounds.

Note: *The event may be a single match, a competition or contest, a tournament, etc.*

B.7.1. Format with group stage followed by knockout and final stages

This format is based on the Football World Cup format.

The event begins with a group stage followed by a knockout stage (round of 16, and/or quarter-finals, semi-finals), and then by the final stage with the play-off for the third place and the final.

In the group stage, every team play a match against each other team of the group. For each group, it could be considered 3 to 5 teams taking care of a close number of teams for all groups.

The groups are defined with a random draw.

B.7.1.1 Group stage ranking

For each match, points will be awarded as follows:

- 3 points for a win.
- 1 point for each team for a draw.
- 0 point for a defeat.

In each group, the two best placed teams will be selected for the first knockout stage round.

The ranking of each team in their group will be determined with the following criteria:

- a) Greatest number of points obtained in all matches of the group.
- b) Goals difference in all matches of the group.
- c) Greatest number of goals scored in all matches of the group.

If, on the basis of the above criteria, there is still a tie for the first or the second place in the group, a penalty shootout will be organized to break the tie between the concerned teams.

B.7.1.2 Knockout stage

The knockout stages are done with direct elimination of the teams which have lost their match.

B.7.1.3 Scenarios for illustration

See below two examples of scenarios, one corresponding to a scenario for 24 teams and the other to a scenario for 16 teams.

a) Scenario for 24 teams

- Group stage: 8 groups (A to H) with 3 teams in each group. Each team plays 2 matches which means 3 matches for each group and so a total of 24 matches for the group stage.
- First knockout stage round (round of 16) - 8 matches (16 teams)
 - . Winner A & Runner-up B = 1
 - . Winner B & Runner-up A = 2
 - . Winner C & Runner-up D = 3
 - . Winner D & Runner-up C = 4
 - . Winner E & Runner-up F = 5
 - . Winner F & Runner-up E = 6
 - . Winner G and Runner-up H = 7
 - . Winner H and Runner-up G = 8

- Second knockout stage round (quarter-finals) - 4 matches (8 teams)
 - . Winner 1 & Winner 3 = A
 - . Winner 2 & Winner 4 = B
 - . Winner 5 & Winner 7 = C
 - . Winner 6 & Winner 8 = D
 - Third knockout stage round (semi-finals) - 2 matches (4 teams)
 - . Winner A & Winner C
 - . Winner B & Winner D
 - Play-off for third place - 2 teams & 1 match: Semi-finals losers.
 - Final - 2 teams & 1 match: Semi-finals winners.
- 40 matches in total: 24 for the group stage, 14 for knockout stage and 2 for the final stage.

b) Scenario for 16 teams

- Group stage: 4 groups (A to D) with 4 teams in each group. Each team plays 3 matches which means 6 matches for each group and so a total of 24 matches for the group stage.
 - First knockout stage (quarter-finals) - 4 matches (8 teams)
 - . Winner A & Runner-up B = 1
 - . Winner B & Runner-up A = 2
 - . Winner C & Runner-up D = 3
 - . Winner D & Runner-up C = 4
 - Second knockout stage (semi-finals) - 2 matches (4 teams)
 - . Winner 1 & Winner 3
 - . Winner 2 & Winner 4
 - Play-off for third place - 2 teams & 1 match: Losers of the semi-finals.
 - Final - 2 teams & 1 match: Winners of the semi-finals.
- 32 matches in total: 24 for the group stage, 6 for knockout stage and 2 for the final stage.

B.7.2. Format with successive rounds

This format may be run with direct elimination, or with double elimination.

Note: *In such a format, a lower total of matches is played compared to the other format, which means less time necessary to run the event for a given total number of teams.*

A random draw will be done for each round. When it is possible, it is recommended to avoid a same pair of teams in two different rounds.

In a situation of an odd number of teams in a round, the last team which has been drawn will not play in the round. This team will play twice in the following round:

- in the first match;
- and then in the last match if the number of teams permits it and if the team is not eliminated after the first match.

For each match, the winning team is selected for the next round.

For the direct elimination option, each team losing its match in the first round is eliminated, and so on for the following rounds.

For the double elimination option, a team will be eliminated after losing two matches.

B.8. ORGANISATION OF A MATCH

A match is subdivided in three sets. Period of time for each set will be 3 (three) minutes.

Except an exceptional circumstance, the break between two sets will be limited to about two to three minutes which is normally sufficient to get back the drone balls and place them on the start areas.

Note: *It is recommended to provide a LED display or equivalent to show the remaining playing time. This will be useful for the teams, the officials and the audience.*

B.8.1. Position of the teams on the playing field

The match referee does a coin toss in order to determine position of the teams on the playing field (left or right side).

The team which wins the coin toss chooses its side, which defines the pilots' area. The teams keep the same side for all the match, and so stay on the same pilots' area for the three sets. Nevertheless, if the match referee considers that a circumstance, such as wind for an outdoor match, may affect the result of the match, he may decide differently. A team cannot complain or protest against such a decision, and cannot request a side change between two sets.

After the allocation of the pilots' areas is decided, the captain of each team may check the goal ring in which the team must score.

B.8.2. Start of a set

The start of each set will be done as follows:

- After the drone balls have been placed on the start areas, the match referee will request the two team captains if their team are ready to start.
- When the match referee considers that the teams are ready, he will announce clearly 'Arm your quads'.
- About 3 to 5 seconds after this announcement, a brief and intelligible sound signal will be done for the start of the set.

The match referee must stop the game and request a new start when he considers that:

- the start procedure has not been done properly;
- a player starts before the signal and doing so may give an advantage to the team.

In case of early start, a penalty shot may be granted against the concerned team (see B.9.1).

B.8.3. End of a set

The match referee is responsible to define the end of the set.

He will take to consider when necessary additional time taking in account that time consumed for a penalty shot must not be considered as a part of the period of time of the set (see B.9.1).

The announcement of the end of the set will be done with a brief and intelligible sound signal.

B.8.4. Scoring

A team scores a goal when the scorer drone ball (striker player) passes through the goal ring of the opponents' team subject:

- the goal ring has been crossed in the direction of the opponents' baseline,
- and when entire drone ball has passed through the entire opponent goal ring.

The match referee is responsible to decide if the goal may be scored even if an automatic scoring system is used.

Scoring by passing through the opponent's goal ring with the drone ball of an active player who is not the striker will not be recognized as a score. There will be no penalty for that.

When a team scores a goal, all active players of the concerned team must immediately return on their side beyond the centre line before attempting a new score. A drone ball which falls on the ground is not concerned by this requirement if the drone ball is no more in situation to take-off again. It is not forbidden for the opponents' team to do blocking to prevent the drone balls to return on their side.

In case of a violation of this rule, a penalty shot may be granted against the concerned team (see B.9.1). In any case, a score which will be considered by the match referee as resulting from a violation of this rule will not be validated.

Note: *In case of a temporary loss of control on a drone ball, the concerned player must do the best to return on its side after recovering the control. When the player considers that the drone ball becomes unable to fly, see B.8.5.*

The striker may pass or remain in its own goal ring for defence purpose. Another active player of the team may pass through its own goal ring when it is not done with the intention to block the opponents' team. When a player, other than the striker, passes or stays inside its own goal ring for defence purpose, a penalty shot is granted against the concerned team (see B.9.1).

B.8.5. Safety occurrence

When a drone ball is no more in situation to fly in safe condition or becomes unable to fly (loss of control, damage, ...), the active player concerned must actuate the drone ball fail-safe, and notify the match referee (or where appropriate the assistant referee) as soon as the drone ball is on the ground. The player concerned must disarm its drone ball, and then leave the pilots' area. The team concerned will play shorthanded for the remainder of the set.

Note: An active player can be requested by the match referee (or an assistant referee) to stop to fly if it is considered the drone ball no longer meets acceptable safety standards. It could be for example the case when the drone ball is damaged after a collision or after a crash, or when the pack of batteries is dangling.

When this concerns the striker, the team captain may call a time out to the match referee. The match referee will stop clock, and will request all players to immediately land their drone ball. After all drone balls landed, the striker must disarm its drone ball, and then leave the pilots' area. A different active player of the team concerned will be appointed striker; its drone will be placed in the start area of the team concerned. The team captain will mention the new striker to the match referee. Referee will resume play. A team may replace their striker only once in a set.

B.8.6. Set and match result

For each set, the team that scores more goals in the set wins the set. If both teams score the same number of goals, or neither team scores a goal, the set ended in a draw.

The team that wins the best of three sets wins the match.

If both teams win the same number of sets in the match, the match is a draw. The main referee defines how to proceed when it is necessary to decide between the two teams (for example for an event with direct elimination rounds): coin toss, time overtime period, penalty shootout, This must be clearly announced before the beginning of the event.

Overtime period: It will be run same way as a standard set except the first goal determines the winning team (Sudden death / Golden goal).

Penalty shootout: It will be played same way as the penalty shot (see B.9.1). A minimum number of penalty shots (for example 5) is defined. Whenever possible, penalty shots must be done by different players of the team. All teams will be informed of the penalty shootout procedure which will applied before beginning of the event.

In case a team withdraws for a match (or for the rest of event), the concerned match(es) will be considered as lost by the team. The same applies or is disqualified from the event.

If a match is definitively stopped before its end, the current result based on the number of sets won determines the winner of the match except when the match is stopped because a team get a red card (see B.9.4). If both teams are equal and when it is necessary to decide between the two teams (for example for an event with direct elimination rounds), the match referee organizes a coin toss to determine the winner.

If the event cannot go on to the end, the last available provisional ranking will be considered for the final ranking.

B.8.7. Video recorder

In case a video recorder to monitor the match is installed, this "official" video record cannot be used by the match referee to make decisions or to review a decision during the match.

It may only be used by the concerned official(s) to manage a complaint or protest.

B.9. PENALTIES

All penalties (penalty shot, warning, yellow and red card) are granted by the match referee.

Penalties are no more valid as soon as the match is finished.

B.9.1. Penalty shot

A penalty shot may be granted against a team in the following situations:

- Start of a drone ball before the start signal (see B.8.2).
- When the player(s) do not return properly on their side after their team has scored a goal (see B.8.4).
- When an active player other than the striker passes or stays inside its own goal ring for defence purpose (see B.8.4).

The penalty is kicked by the striker (scorer drone ball) against one defender of the opposite team. A 10 seconds period is given for the penalty shot attempt after the signal of the match referee.

The time consumed for the penalty shot will not be considered as a part of the period of time of the set.

Penalty shots may be staged at the end of the set with remaining battery. This must be announced by the event director before the beginning of the event.

B.9.2. Warning

A warning may be given to a team in the following situations:

- Non authorised person (reserve player, coach, ...) in the pilots' area during a set.
- Minor uncivilized conduct of a player or a coach towards a referee, an opponent player or coach, or a spectator.
- Delay of the start of the match or of a set caused by a team without acceptance of the match referee.
- Simple movement of a drone ball before the signal ball which will not be considered as an early start.
- Non intentional contact during a set of a drone ball on a person.

B.9.3. Yellow card

When two warnings are given for the same reason during a match to a team, a yellow card is given to the team.

In addition, a yellow card may be directly given to a team in the following situations:

- Change of an active player during a set.
- Major uncivilized conduct of a player or a coach towards a referee, an opponent player or coach, or a spectator.
- Intentional manipulation of a drone ball during a set.
- Intentional contact during a set of a drone ball on a person.

The active player responsible receiving the yellow card will be ejected from the rest of the set, and the team concerned will continue with the remaining active players.

When the yellow card does not concern a particular active player, the team captain decides the active player to be ejected from the rest of the set.

B.9.4. Red card

When two yellow cards are given during a match to a team, a yellow card is given to the team.

In addition, a red card may be directly given to a team in the following situations:

- Active player not registered on the players' list.
- Severe uncivilized conduct of a player or a coach towards a referee, an opponent player or coach, or a spectator.
- Dangerous or hazardous behaviour or action of an active player during a set.

The active player receiving the red card will be ejected from the rest of the match, and the team concerned will play with one less drone during the rest of the match.

When the red card does not concern a particular active player, the team captain decides the active player to be ejected from the rest of the match.

B.10. INTERRUPTION OF THE EVENT

The event should be interrupted or the start delayed in the following circumstances:

- For an outdoor event, due to atmospheric conditions (rain, stormy condition, ...) in which it would be dangerous to continue to fly, or if wind is continuously stronger than 9 m/s measured at 2 m above the ground near in the centre of the playing zone for at least one (1) minute.
- Any incident affecting safety or requiring access for emergency services

The decision is taken by the main referee in conjunction with the event director.

The match referee has the right to interrupt a set for an external disturbance or any other justified reason. When an interruption occurs during a set, the set must be completely rerun when possible except if the match referee considers a team as directly responsible of the interruption (for example

forfeit). In that situation, the team which is the cause of the interruption loses the set which means the other team wins it.

The decision to stop definitively a match must be taken by the main referee.

B.11. DISQUALIFICATION FROM THE EVENT

A disqualification from the event is decided by the event director with the consent of the Jury.

A disqualification from the event affects the concerned team for the entire event. A team is disqualified is placed at the end of the ranking with a 'DISQ' mention.

Disqualification from the event may be considered in the following situations:

- Use of a drone ball or equipment which does not conform to the rules.
- Deliberate very dangerous behaviour of an active player on another person.
- Unsporting behaviour of a member of the team.

B.12. OFFICIALS

B.12.1. Event director

The event director is in charge of the complete oversight of the event.

He has the responsibility of the safety concerns and will support the main referee to ensure compliance of the event with rules.

He is also in charge to:

- Organize the running of the event (draws, detailed schedule, order of the matches, etc.) according to the event format which has been retained.
- Nominate for each match the referee (and assistants where appropriate).
- Validate the result of each match and the provisional and final ranking.

Following responsibilities and duties of the event director are also defined in the present rules:

- Definition of the eventual restrictions for use of RC systems equipment outside the playing field (see B.1.4).
- Possibility of practice flights (see B.6).
- Disqualification from the event of a team (see B.11)

B.12.2. Referees

A main referee will be appointed for the event in order to manage sportive organisation of the event in conjunction with the event director.

In addition, match referees or assistant referees may also be appointed as necessary. In the situation where match referees are not appointed, the main referee will also have the function of match referee.

B.12.2.1 Main referee

The main referee has the final authority regarding application of the drone soccer rules for the event.

Responsibilities and duties of the main referee as defined in the present rules are:

- Before the beginning of the event, definition how to proceed when it is necessary to decide between the two teams in case the match is a draw (see B.8.6).
- Checking of the compliance of the drone balls with specification rules (see B.1).

Note: *Before the event, a processing with marking of the drone balls may be organised. During the event, in case of doubt, main referee may request the organiser to check the characteristics of a specific drone ball. He may also consider a random spot-check following any race to check the most important characteristics of the drone ball.*

- Decision to reduce during the event the number of authorized active players (see B.4.1).
- Interruption of the event or delay of the start if necessary (see B.10).

B.12.2.2 Match referee

The match referee has the global responsibility to lead the match seamlessly, smoothly, and fairly in cooperation with the assistant referees where appropriate.

He must also take appropriate attention about the safety concerns during the match and take care that only authorized persons are present on the playing field.

He will be positioned in order to have an overview of the entire playing field and to be seen by the active players. He will be equipped with a microphone or equivalent in order to be heard clearly by every active player on both sides of the playing field.

Responsibilities and duties of the match referee as defined in the present rules are:

- Choice of the position of the two teams on the playing field (see B.8.1).
- Check before each set that the active players for both teams are on the players' list (see B.4.2).
- Start (see B.8.2B.8.3) and end (see B.8.3) of each set.
- Break time between two sets (see B.8).
- Validation of goals and scores (see B.8.4).
- Request an active flyer to stop to fly if it is considered the drone ball no longer meets acceptable safety standards (see B.8.5).
- Set and match result (see B.8.6).
- Granting of penalties (see B.9).
- Interruption of a set for an external disturbance or any other justified reason (see B.10).
- Record at the end of the match of the score of each set, the final result of the match, the penalties which have been granted during the match and any incident he will consider justified to notice.

The main referee may change his(her) decision if he considers he has done an error of judgment or after considering the advice of an assistant referee. In any case, the position of the main referee prevails in case an assistant referee has a different opinion.

B.12.2.3 Assistant referee

When assistant referees are considered, it is recommended to appoint two assistant referees for a match (one on each side of the playing field).

Each of them will be positioned outside the flying zone in a correct place to observe their goal ring and pilots' area. They must in situation to easily communicate with the main referee.

They will be in charge to particularly follow the game on their side of the playing field.

The main referee will precise before the match to the assistant referees what he expects first and foremost from them.

B.12.3. Jury

In any International event included in the FAI Contest Calendar, a FAI Jury must be nominated according to Volume CIAM General Rules C.7.1 and C.7.3.

In the other events, a Jury may be nominated to make all decisions dictated by any circumstances which may arise and to rule on disputes.

C. F9U (PROVISIONAL CLASS) - RC MULTI-ROTOR DRONE RACING RULES

Drone Racing consists of several multi-rotor model aircraft flying together through a closed racing circuit.

Note: A multi-rotor is a rotary wing radio-controlled model aircraft equipped with at least three power driven propeller devices.

The generic term 'model' will be used in the present document.

Each model is operated by an FPV (First Person View) pilot who is considered as the competitor. The FPV pilot is equipped with a headset goggle that allows him(her) to pilot from the video picture of the onboard camera which is transmitted in real time on his(her) headset goggle.

The FPV pilot is assisted during the race by one and only one helper who stays next to him during the whole flight. The helper is mandatory. He may be another competitor.

The main task of the helper is to keep the model in visual line of sight. He must inform the FPV pilot of anything occurring that can affect his(her) piloting, especially about safety. If the helper requests the FPV pilot to land or to cut off the motors, he must do it immediately. In case of emergency, the helper is authorized to shut off the transmitter in order to trigger the fail-safe device.

C.1. GENERAL SPECIFICATIONS FOR MODELS

The model must be equipped with a fail-safe device, the triggering of which stops the motors.

The following are strictly forbidden:

- Pre-programmed manoeuvring device.
- System for automatic positioning and/or path rectification in longitude, latitude or height.

Note: Software recovery modes such as 'anti Turtle' or 'anti crash' and automatic system which can be activated by the pilot in order to level back the model after a crash are permitted.

C.1.1. Weight and size

The total weight of the model including all equipment necessary for flight (including batteries) shall not exceed 1 kg.

The axes of all motors must fit within a circle of 330 mm diameter.

C.1.2. Motorization

Only electric motors are allowed.

Battery pack up to 6 S is allowed. The voltage for each cell must not exceed 4.25 V. This means a maximum voltage of 17 V for a 4S battery pack, and 25.5 volts for a 6S battery pack.

The voltage measurement will be done before the flight.

The reference plane is defined with propellers centres. Each motor can be tilted up to 15° maximum angle in each direction.

On a tri-copter, the inclination of a motor in flight is only allowed with the yaw order.

C.1.3. Propellers

Maximum diameter: 6 inches (15.2 cm).

Full metal propellers are forbidden.

C.1.4. Radio control (RC) equipment

Any 2.4 GHz spread spectrum technology RC equipment may be used.

Frequencies and emission power can only be those authorized in the organiser country.

The organiser may define a list of authorized RC equipment, for example 868 MHz / 915 MHz modules.

The output power of 868 MHz / 915 MHz RC modules must be settled to 100 mW maximum or a lower output that fulfils local regulations.

He may also define a list of authorised equipment in order to minimize risk of radio control problems. This information must be available at least one month before the event.

In order to limit risk of potential problems during the races with unwanted interference, the organiser may define restrictions for use of RC systems equipment outside the racing circuit.

In case of use of non-authorized RC equipment, penalty going up to disqualification from the event may be imposed to the concerned competitor by the event director with the consent of the Jury.

C.1.5. Video system

Recording of all races by the organiser is strongly recommended in order to rapidly review races as necessary in case of doubt or complaint.

The organiser must inform before the event about the types of video devices (analog only, or digital only, or both) which are authorised for the event.

The organiser may define a list of authorized video transmitters (VTX) in order to minimize risk of video problems and/or permit live transmission of the pilot view on large screens for the spectators and/or media production with the appropriate quality.

The list of authorized VTX must be available at least one month before the event.

Note: *The organiser may not restrict to only one VTX. The list must not be defined with commercial consideration.*

Analog and digital VTX must be set with 25 mW maximum power emission. In addition, the digital video device must be set to 25 Mbps maximum.

The organiser may also request use of a certain type of VTX antennas with the appropriate polarization.

Frequencies and emission power can only be those authorized in the organiser country.

In order to limit risk of potential problems during the races with unwanted emission, the organiser may define restrictions for use of video transmitters outside the racing circuit.

In case of non-authorized activation of a video transmitter, a penalty going up to disqualification from the event may be imposed to the concerned competitor by the event director with the consent of the Jury.

C.1.6. LED light device (Optional)

In order to increase visibility of the models to spectators during the races and to facilitate the task of the judges, the organizer may request that competitors equip their models with an LED light device that has the capability to choose from a set of different colours so that each model in flight can be uniquely identified.

In that situation, the organiser must define at least one month before the event a list of authorized LED light devices and the colours which will be used.

Note: *In order to simplify the organisation and improve the understanding of the races by the spectators, the colours may be allocated according to the order of the pilots in the race.*

C.1.7. Identification mark

Each model shall carry the 3 (three) letters national identification mark followed by the FAI Sporting Licence (or Drone Permission) ID number.

The letters and numbers must be at least 6 mm high and appear at least once on each model.

C.2. RACING CIRCUIT

The racing circuit may be outdoor or indoor.

A racing circuit (or track) is a volume that defines a 3D flight path. It is formed by a start line, obstacles to be crossed or avoided and a finish line.

The racing circuit can be a closed loop where several laps must be completed or an open loop to be flown once. In both cases, the track can be divided into sectors to facilitate timekeeping.

The minimum length of a racing circuit from the start line to the end line, including all laps, is 250 m. The length of a track is measured along the centerline of the optimum 3D flight path.

The organiser may keep the circuit secret or make it public before the event. In both cases, the organiser must make every effort to prevent giving an unfair advantage to some competitors.

If the circuit is made public, it must be published at least one month before the event. Only minor changes are allowed following publication and those changes must be justified. The organiser must inform the competitors immediately after any changes are approved.

If the circuit is kept secret, the main characteristics (approximate length, number of laps, focused on speed/technical/both, types of obstacles, etc.) must be published at least one month before the event to allow time for the competitors to adapt their equipment as much as possible for the event.

See Annex C.1 for the racing circuit specifications and recommendations.

C.3. NUMBER OF MODELS

Each competitor may use a maximum of 3 (three) models for the entire event.

A model can be used by only one competitor per event.

In case of an infringement to those rules, all concerned competitors will be disqualified from the event by the event director with the consent of the Jury.

Before the race, the competitor can change the model in the preparation area. Any technical problem after leaving the preparation area will be considered a race incident with no more possibility to change the model.

C.4. MODEL REGISTRATION AND PROCESSING

Each competitor can register up to three models. The organiser will mark each registered model with an easily visible, difficult to falsify identification such as a sticker.

During registration, the specifications of the model may be checked by the organiser including:

- Identification mark.
- Weight and size.
- Batteries (voltage).
- Fail-safe and associated device to cut off the motors.
- Radio control equipment.
- VTX, camera and headset goggle.
- LED light unit if such a device is required by the organiser.

If one of the models registered is lost or destroyed due to causes not applicable to the competitor concerned, the competitor shall have the right to present a replacement model for registration and processing up to one hour before the official starting time of the event.

During the event, on request of the race director, or event director, or Jury, any model may be checked by the organizer after the race to ensure it fits the specifications.

A competitor whose model is not compliant may be disqualified from the event by the event director with the consent of the Jury.

C.5. PRACTICE FLIGHTS

Practice flights on the racing circuit other than those authorized by the organiser are strictly forbidden under threat of being disqualified from the event by the event director with the consent of the Jury.

At least one practice session or warm up will be organized to ensure track, models and competitors are ready. It must be held on the race circuit.

The organizer will define the conditions and number of practice sessions. This information must be available at least one month before the event. As suggested options, warm up can be one or more free practice sessions organized by random groups with an allocated time/laps, or a practice race just before the first race. All competitors will be allocated same time/laps to ensure for all of them the same flight opportunities on the track.

It is mandatory for every competitor to participate on at least one practice session or warm up. If the model is not able to start or crashes immediately after the start, it will be considered a race incident. No reflight will be possible on that practice session. If a competitor has not been able to fly on at least one practice session, the competitor concerned may be not authorized to compete in the event; this is decided by the event director with the consent of the Jury.

If the practice session is celebrated just before the first race of competitor(s), the competitor(s) concerned may request a break to go back to the preparation area, for instance to change its model or batteries.

C.6. EVENT ORGANISATION

An event is normally organized on the basis of three stages:

- Qualification stage (rounds for qualification for the elimination stage).
- Elimination stage (to qualify for the final stage by successive elimination rounds).
- Final stage.

Note: *The event may be organized with only one stage based a fixed number of rounds for all competitors, especially when the total number of competitors is below 16. For each race, each competitor will be awarded a number of points corresponding to his(her) place. The final placing is then done taking in account the sum of the points awarded to every competitor in all rounds.*

Each round for the qualification stage and the elimination stage is organized by groups (subdivision of the round corresponding to the number of competitors flying at the same time in the same race).

It is recommended to run the event with a maximum of 4 (four) competitors per race in order to minimize risk of video problems especially for elimination and final stages. Nevertheless, when the number of competitors justify it, the qualifying rounds may be run with 6 (six) competitors per group subject it is legally and technically possible.

C.6.1. Timekeeping

Wherever possible, timekeeping will be done with an electronic timing system with appropriate redundancy in order to ensure complete and permanent reliability of the timekeeping.

Note: *In case timekeeping will be done without electronic timing system (manual timekeeping only), the organiser must inform the competitors at least one month before the event.*

Except for qualifying stage, timekeeping is triggered at the start of the race.

For the qualifying stage, timekeeping is triggered for each model when the model passes the gate equipped with the timekeeping sensor(s). After taking off from the start area, the model must go directly to the gate equipped with the timekeeping sensor(s).

C.6.2. Procedure for the start of the race

The start of the race will be done as follows:

- After the models have been placed on the start area, the starter will request the pilots if they are ready to start.
- When the starter considers that the pilots are ready, 'Pilots, arm your quads' will be clearly announced.
- About three seconds after this announcement and taking care of an equivalent time for all races, there will be a brief and intelligible sound signal for the start of the race; no countdown (3, 2, 1) will be done before the start signal.

The starter must immediately stop the race and do a new start when he considers that there has been a technical problem with the start signal. Before the restart, the pilots will be given the opportunity to change the battery pack on their model.

If one or more pilots starts before the start signal (model not touching any point of its start area) the race will not be stopped, and the concerned pilots will be disqualified from the race.

C.6.3. Qualification stage

The number of qualifying rounds is defined by the organiser according to the available time with, whenever possible, a minimum of 3 (three) qualifying rounds.

Composition and flight order of the groups will be determined with a blind draw.

Note: *A different draw for each qualifying round is recommended in order to avoid the same competitors fly in the same group for all qualifying rounds. In any case, the same draw cannot be applied to more than three qualifying rounds.*

Races with fewer than the required number of competitors (4 or 6), for example in case of withdrawal of a competitor, will be put at the end of the draw of the round, in order to allow a complete competitors race with competitor(s) that have been granted a reflight in that qualifying round.

If necessary, the last groups of each qualifying round may be rearranged by the race director (under supervision of a Jury member) in order to achieve as much as possible a minimum of 3 competitors per group.

The organiser defines the qualification method which will be used and must announce it at least one month before the event.

Find below two examples of qualification methods.

a) Fastest time to complete a required number of laps

Note: *It is not recommended to use this qualification method when only three qualifying rounds or less are scheduled.*

The organiser defines the number of circuit laps to complete and the time allowed for that.

When the competitor has completed the number of circuit laps defined or when the time allowed is over, he/she must land the model.

For each competitor, the result of the qualification round corresponds to his/her registered time to complete the required number of laps.

A provisional ranking will be established at the end of the qualifying stage, taking in account the best result obtained by each competitor on their qualifying flights. In case of a tie for the last place(s) for selection to the elimination round, the 2nd best result will be considered to split the tie, and then if necessary the 3rd result. In case the results of the qualifying flights are not sufficient, a tie-break flight will be organized between the competitors still concerned by the tie.

When the number of competitors required for the elimination stage is not reached, an additional qualifying flight will be organized for the competitors who have not been able to set a time at that stage. This will be repeated until the appropriate number of competitors for the elimination stage is reached.

b) Average of the 3 best times to perform a lap

The organiser defines the number of consecutive laps that will be timed and the time allowed for that.

When the competitor has completed the number of laps that may be timed or when the time allowed is over, he/she must land the model.

The result of each competitor for the qualification stage will be the average of the 3 (three) best times recorded to perform one valid circuit lap taking in account all the qualifying rounds. Those best times may be done in the same qualifying round or in different ones.

Note: *Instead of 3, a different number of best times may be considered (2, 4, ...).*

A provisional ranking will be established at the end of the qualifying stage, taking in account the result obtained by each competitor. In case of a tie for the last place(s) for selection to the elimination stage, the 4th best time recorded to perform one valid circuit lap result will be considered to split the tie, and then if necessary the 5th one, and so on. In case the times are not sufficient, a tie-break flight will be organized between the competitors still concerned by the tie.

When the number of competitors required for the elimination stage is not reached with the competitors getting 3 (three) times, competitors getting only 2 (two) times to perform one valid circuit lap will be considered taking in account the average of their 2 times. If it is still not sufficient, competitors getting only 1 (one) time to perform one valid circuit lap will be considered.

When the number of competitors required for the elimination stage is still finally not reached, an additional qualifying flight will be organized for the competitors who have not been able to set a time at that stage. This will be repeated until the appropriate number of competitors for the elimination stage is reached.

In any case, the competitors who need an additional qualifying flight to achieve a time to be selected for the elimination stage will be placed after those who are already selected, and then those who need a second additional flight, and so on.

C.6.4. Elimination stage

The elimination stage will be organized according to one of the three following scenarios:

- Scenario A - 64 competitors selected from qualification stage.
- Scenario B - 32 competitors selected from qualification stage.
- Scenario C - 16 competitors selected from qualification stage.

The choice of scenario will be done by the organiser before the beginning of the event considering the total number of competitors in order to give possibility to a maximum of competitors to fly the elimination stage.

All races of the elimination stage will be run on a defined number of laps taking in account the performance achieved during the qualification stage. Except under exceptional circumstances, the number of laps will be identical for all rounds of the elimination stage.

The placing for each race is determined taking in account the time achieved when the number of laps is completed.

Those who will not finish their flight will be ranked considering the distance completed (number of laps and part of the last lap completed), disqualified competitors being placed at the end.

The two best placed will be directly selected for the next round.

In case of a tie for the second place, the placing in the provisional ranking established at the end of the qualifying stage will be considered to define who is selected for the next round.

Double elimination optional sequence

Instead of direct elimination of the competitors placed third and fourth in each race of any elimination round, the double elimination sequence may be applied.

This sequence is optional. The organiser must inform the competitors at least one month before the event if double elimination sequence will be applied or not.

This optional sequence allows competitors eliminated in elimination rounds to continue to fly still getting possibility to access the final.

Competitors placed third and fourth in any race of the double elimination sequence are definitively eliminated.

Organisation of the races

For the first elimination round, the composition of the groups for the races is defined considering the provisional ranking established at the end of the qualifying stage.

For each scenario, the composition of races for the first elimination round and detailed organisation of the rounds up to the final are defined in:

- Annex C.2 for scenario A (64 competitors selected from qualification stage).
- Annex C.3 for scenario B (32 competitors selected from qualification stage).
- Annex C.4 for scenario C (16 competitors selected from qualification stage).

Note: *When the number of competitors is lower than the number of competitors required for the considered scenario, some races of the 1st elimination round will be flown with 3 competitors instead 4. As an illustration, if for the scenario B there are only 28 competitors (instead the 32 normally required), then races 1, 4, 5 and 8 will be flown with 3 competitors considering there are no competitors placed 29 to 32 after the qualifying stage.*

C.6.5. Final stage

The organizer must clearly inform the competitors before the competition begins how the final stage will be held. If it is not done, the final must be run with only one final race.

C.6.5.1 Double elimination sequence not applied for the elimination stage

The two best placed competitors in each of the two semi-final races are selected for the final to determine their final ranking from 1st to 4th place.

A small final may be organised for the other two competitors from the semi-final races to determine their final ranking from 5th to 8th place.

C.6.5.2 Double elimination sequence applied for the elimination stage

The two best placed in the last elimination round (one race) and the two best placed in the last round of the double elimination sequence (one race) are selected for the final race to determine their final ranking from 1st to 4th place.

C.6.5.3 Successive final races (Optional)

Instead a single final race, the final may be run with successive final races. The final is over as soon as a finalist competitor has won two final races. This competitor is the winner of the competition.

For the final ranking for 2nd to 4th places, points will be allocated as follows in each final race: 1 point for the first placed, 2 points for the second, 3 points for the third and 4 points for the fourth.

The ranking of the finalists concerned will be done taking in account their sum of points in all the final races, the finalist with the lower sum of points being placed 2nd, and so on.

In case of a tie, the placing in the last final race will be considered to split the tie for the concerned finalists.

Note: This option of successive final races cannot be applied to the small final which may be organised when the double elimination sequence is not applied for the elimination stage (See C.6.5.1).

C.6.6. Additional rounds optional sequence

This sequence is optional. This option allows the competitors who are not selected to fly in the first elimination round after the qualification stage to be entitled to participate to additional rounds to determine their final placing.

The organiser must inform the competitors at least one month before the event if additional rounds sequence will be applied or not, and when applied how it will be organized.

The additional rounds sequence may be organized:

- with successive eliminating rounds as proceeded for the elimination stage (See C.6.4);
- or with a fixed number of rounds for all concerned competitors.

Additional rounds sequence based on a fixed number of rounds for all concerned competitors

The number of additional rounds is defined by the organiser considering available time.

Composition and flight order of the groups will be determined with a blind draw. The draw will be different for each additional round.

Races with fewer than the required number of competitors (4 or 6), for example in case of withdrawal of a competitor, will be put at the end of the draw of the round in question, in order to allow a complete competitors race with competitor(s) that have been granted a reflight in that round.

If necessary, the last groups of each additional round may be rearranged by the race director in order to get a maximum of races with the required number of competitors.

When a race does not contain the required number of competitors (4 or 6) at the end of the round, volunteers will be requested to allow the remaining race to start with the required number of competitors.

If there are too many volunteers, the race director will conduct a blind draw to determine the necessary volunteers and then a separate draw for the order in the race concerned (for positioning on the start line).

If there are insufficient volunteers, the race will start with fewer than the required number of competitors number (4 or 6).

The volunteer(s) shall not be eligible to have their result registered or to be granted a reflight from this race.

At the end of each race, each competitor will be awarded a number of points corresponding to his(her) place.

The following allocation of points is suggested:

- a) **Competitors number per group = 4:** 1 point for the first placed, 2 points for the second, 3 points for the third and 4 points for the fourth. A competitor who does not fly in a race or does not finish it gets 5 points. A competitor who is disqualified for the race gets 6 points.
- b) **Competitors number per group = 6:** 1 point for the first placed, 2 points for the second, 3 points for the third, and so on. A competitor who does not fly in a race or does not finish it gets 7 points. A competitor who is disqualified for the race gets 8 points.

The organiser must clearly precise to the competitors before the competition begins which allocation of points will be applied. If not done, the above suggested points allocation will be applied.

The final placing will be done taking in account the sum of the points awarded to every competitor in all the additional rounds, the competitor with the lower sum of points being placed ahead, and so on.

In case of a tie, the placing in the provisional ranking established at the end of the qualifying stage will be considered to split the tie for the concerned competitors.

C.6.7. Final classification

Final classification tables are provided in Annex C.2 for scenario A, Annex C.3 for scenario B and Annex C.4 for scenario C.

Those tables cover the different possible situation with double elimination and/or additional rounds sequences applied or not.

C.7. FLIGHT OCCURRENCES

C.7.1. Obstacle damaged or destroyed during the race

When an obstacle is accidentally damaged or destroyed during a race, the pilots will be informed as soon as possible of the incident and how to proceed.

Note: *The organiser must define the person (race director, starter,...) in charge to decide how to proceed and to clearly inform the pilots.*

In the case where it concerns an obstacle to be crossed (air gate, tunnel,...), the decision may be to continue to cross the obstacle, or to give permission to bypass it, or to stop the race. When bypassing of the concerned obstacle is authorized, pilots must do their best not to take advantage of the situation.

In case it concerns an obstacle to be avoided, the race will continue except if it is decided differently considering for example that safety is impacted. When race continues, pilots must do their best to follow the track and not to take advantage of the situation.

C.7.2. Faults and penalties

In the case a pilot does not fly on the expected way (does not cross an obstacle, misses a pylon or flag, does a circuit cut ...) the corresponding circuit lap will not be validated. The pilot may try to execute immediately and on a safe manner a manoeuvre to correct the mistake.

If the pilot corrects its mistake, the lap will be validated.

If during this manoeuvre the pilot has a collision with another model, the pilot will be disqualified for the race.

C.7.3. Disqualification from the race

A pilot may be disqualified from a race in the following circumstances:

- Start before the start signal (See C.6.2).
- Collision with another model when executing a manoeuvre to correct a mistake (See C.7.2).
- Circuit exit (crossing of the safety line).
- Celebratory manoeuvre, especially after the pilot finishes.
- Hazardous piloting or safety compromised.

The disqualification is decided by the race director or, where applicable, by the judge assigned to the concerned pilot.

When a pilot is disqualified, he must land as soon as he has been informed. In any case, the result of the pilot for the race will not be validated.

Pilot(s) disqualified will be placed for the race after the other pilots. In case more than one pilot is disqualified from the race, the pilots concerned will be placed taking into account the qualification stage ranking.

If a pilot disqualified from a race is considered not being sufficiently cooperative to land, the concerned pilot may be disqualified from the event by the event director with the consent of the Jury.

C.7.4. Crash

When a model crashes, the concerned pilot can resume if the model is in a situation to do so.

When the model cannot go on, it must stay on the ground with motors cut off until the end of the race.

The pilot must clearly indicate that he/she stopped the race by putting off his/her headset google.

The pilot and the helper must then stay quiet in their position until the race is finished for all pilots.

C.7.5. Safety occurrence

A pilot can be requested to stop to fly if it is considered the model no longer meets acceptable safety standards. It could be for example the case when a model is damaged after a collision or after a crash, or when the battery is dangling.

In case of a serious safety issue, the race director may decide to stop the race and disqualify the pilot(s) eventually responsible of the safety issue. A restart of the race will be done for the pilots who had not been disqualified and were still in the air when the safety issue occurred.

C.8. REFLIGHTS

Possibility of an individual reflight will only be considered for the qualification stage.

Note: For a video issue, indisputable evidence must be available especially when the pilot concerned had not used the video available from the organiser's receiver.

The reflights will be organised at the end of the qualifying round concerned, or as part of any race that have fewer than the required number of competitors.

For any competitor being granted a reflight, the original flight for which the competitor has been granted the reflight is then definitively cancelled.

For the rest of the competition (elimination stage, final stage and, where appropriate, additional rounds sequence), individual reflights will not be awarded. In that situation, video issue or collision with another model will be considered as a race incident with no reflight possibility.

C.9. OFFICIALS

C.9.1. Jury

In any International event included in the FAI Contest Calendar, a FAI Jury must be nominated according to Volume CIAM General Rules C.7.1 and C.7.3.

In the other events, a Jury may be nominated to make all decisions dictated by any circumstances which may arise and to rule on disputes.

C.9.2. Officials required to run the event

The running of an event requires the main following officials:

- Event director in charge of preparation, organisation and oversight of the event. The event director has responsibility to ensure compliance with the applicable rules and safety during the whole event.
- Race director in charge of preparation, organisation and oversight of the races. The race director has responsibility to ensure compliance with the applicable rules and safety during the whole race.
- Starter. The starter may be assisted by another official in charge to call pilots for racing, do pre-flight checking, etc.
- Official responsible for score sheets gathering and/or for results accounting.

Note: If timekeeping is done manually (not recommended), one timekeeper minimum per pilot is necessary.

According to the event standing and the number of competitors, some official tasks may be assumed by the same person.

C.9.3. Judges

Considering recording of the races is strongly recommended (See C.1.5), judges assigned to check the performance of the pilots are not an obligation. In case judges are assigned to pilots, they may be dedicated ones or other competitors, specially eliminated ones; potential conflict of interest situation will be avoided.

Note: Recordings provided by the competitor concerned, or other competitors or third parties may be considered. In any case, the recording provided by the organiser will prevail.

Judges assigned will have a video device (video screen, headset or goggles) allowing them to follow the flight of their assigned pilot, sharing the same picture as the pilot.

The judge will monitor that the pilot follows the circuit and crosses every gate and obstacle correctly. He/she will notify the competitor or the helper the infractions or other relevant information noted during the race. The notifications other than a disqualification will be addressed when the race is finished.

Other judges may be assigned by the organizer to perform tasks such as supervision of the pilot judges, monitoring that models stay in visual line of sight or don't cross the safety line, information of the competitors,...

C.10. INTERRUPTION OF THE EVENT

The event should be interrupted or the start delayed by the race director or event director in the following circumstances:

- Wind continuously stronger than 9 m/s measured at 2 m above the ground near the preparation area for at least one (1) minute.
- Due to atmospheric conditions (rain, stormy condition,...) in which it would be dangerous to continue to fly.
- Other exceptional circumstances such as for example incident affecting safety or requiring access for emergency services.

When an interruption occurs during an official flight, this flight is cancelled.

If the event cannot go on, the final ranking will be the last available provisional ranking.

C.11. COMPETITORS INFORMATION

The organiser must display on the site:

- Jury composition.
- Start list for every round.
- Results after every round.
- Provisional rankings and final placing.

Note: *A posting on Internet is also advised if conditions permit it, in order to make it possible for those who are not at the site to follow the progress of the event.*

- **ANNEX C.1** - **RACING CIRCUIT**

1. Racing circuit design

The track should be designed to maximize competition and to demonstrate piloting skills. The organiser is encouraged to demonstrate creativity and to take advantage of the specifics of the site. It is recommended to facilitate live spectator viewing by making the track understandable from an outside point of view.

All racing circuits must be designed on the “safety first” principle. The flight path must prevent accidental diversions from the racing area. In this context, if a pilot flies out of the optimal path, any trajectory to get back to the track must be made in the direction of a safe area without any persons (public, pilots, helpers, judges).

2. Safety

The area where the flight zone is allocated shall be demarcated by a “safety line”. The safety line shall surround the start line, end line, obstacles, 3D flight path, trajectories to get back to the track and areas which a model can reach in case of crash or losing of control.

The safety line must be an unmistakable physical element or marker that must not be crossed by any person without the authorization of an official. The organiser must prepare basic procedures in case of fire or first aid inside the safety line. The plans must be informed to any person before being authorized to cross the safety line

During races or if any model is flying, the presence of any person without the adequate safety equipment (nets, cages, protection suit) in the flight area is strictly forbidden.

The organiser must take care that the competition, live viewing and media coverage of the event can be done while guaranteeing the safety of the concerned persons. Areas for pilots, officials and spectators must be secured (nets, fences, transparent walls, recommended minimum separation,...) to avoid uncontrolled models reaching them.

3. Start

To avoid collisions during the start, the models shall be placed on the start line using one of two schemes:

- 1) Side by side in a single line perpendicular to the optimum starting trajectory, with a minimum separation of 0.5 m and a maximum separation of 1 m between models.
- 2) An inverted 'V' or '_/ ' pattern with one or more models in the front. The minimum separation between models shall be 0.5 m on the side and 0.5 m on the front/back. The maximum separation shall be 1 m on the side and 1.5 m on the back.

If the track is a closed circuit, the start line can be outside of the circuit track.

The model positioning during the start should benefit the pilot with the best performance during the previous stage. If two or more pilots have the same previous performance, the positioning will be decided by a draw.

4. Obstacles

The number of obstacles must be adapted to the environment characteristics; in particular, the available space. The number of obstacles shall maximize competition and demonstrate pilot skills.

Obstacles can be located at any height and position. The flight path between obstacles must allow a smooth flight.

Obstacles must contrast with the background and be perfectly visible with a standard FPV video device at a distance of 30 m. The flight path, once in the area defined by the obstacle, must be clearly marked and obvious to follow.

There are two types of obstacles:

1) Obstacles to be crossed

This type of obstacle (single air gate, combination of air gates, tunnel, etc.) can be crossed in any 3D direction. The internal space can be 2D or 3D of any length and shape. The internal space along with any area used by the optimal flight path must be free of any rigging (wire, rope, etc.).

The obstacle inside shall be free space within a minimum diameter of 1.5 m centered in the optimal flight path.

2) Obstacles to be avoided

This type of obstacle (wall, flag, pylon, flyer, etc.) defines virtual or physical areas that are not intended to cross. They can be a single obstacle to avoid shortcuts or a combination of them that create structures such as horizontal or vertical slaloms.

The design must allow a free space to avoid the obstacle. The free space shall be of a minimum 2.5 m diameter centered in the optimal 3D flight path.

Reasonable efforts should be made by organisers to create or to cover obstacles by shock absorbing materials to protect models in case of a crash.

5. Finish line

The finish line indicates the end of the race. If the track is a closed circuit, the finish line is not necessarily on the circuit track.

The finish line shall be defined by a 2D area to be crossed. The pilot finishes the race when his(her) model touches the area and crosses it completely.

There shall be a pick-up area after the finish line to land or to recover safely the models. The area shall be designed not to interfere after crossing the finish line with the flight of the other pilots.

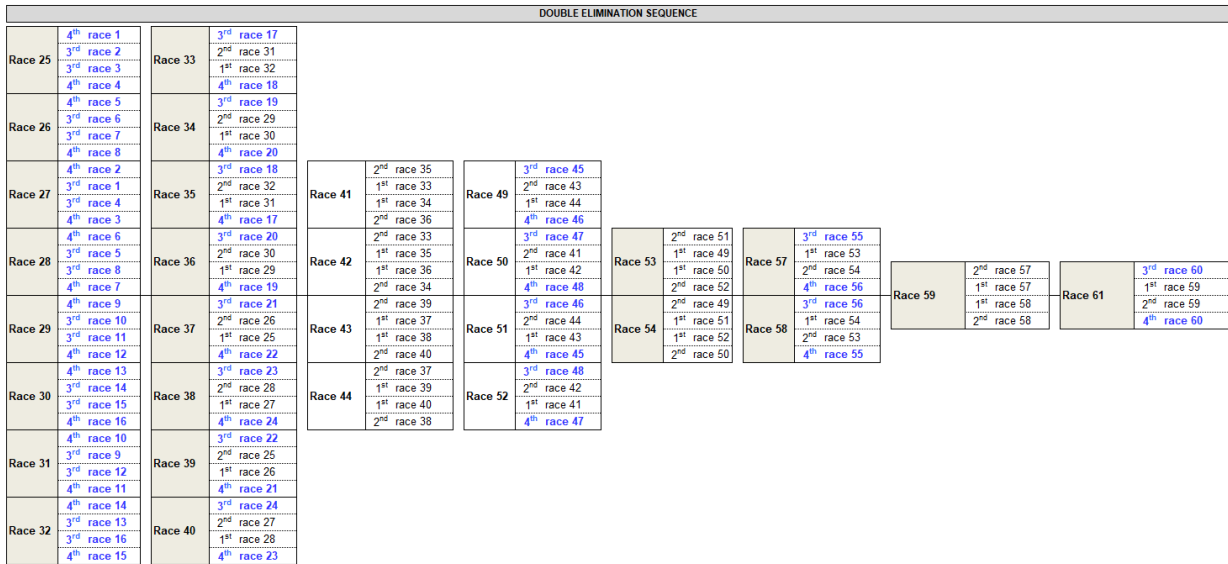

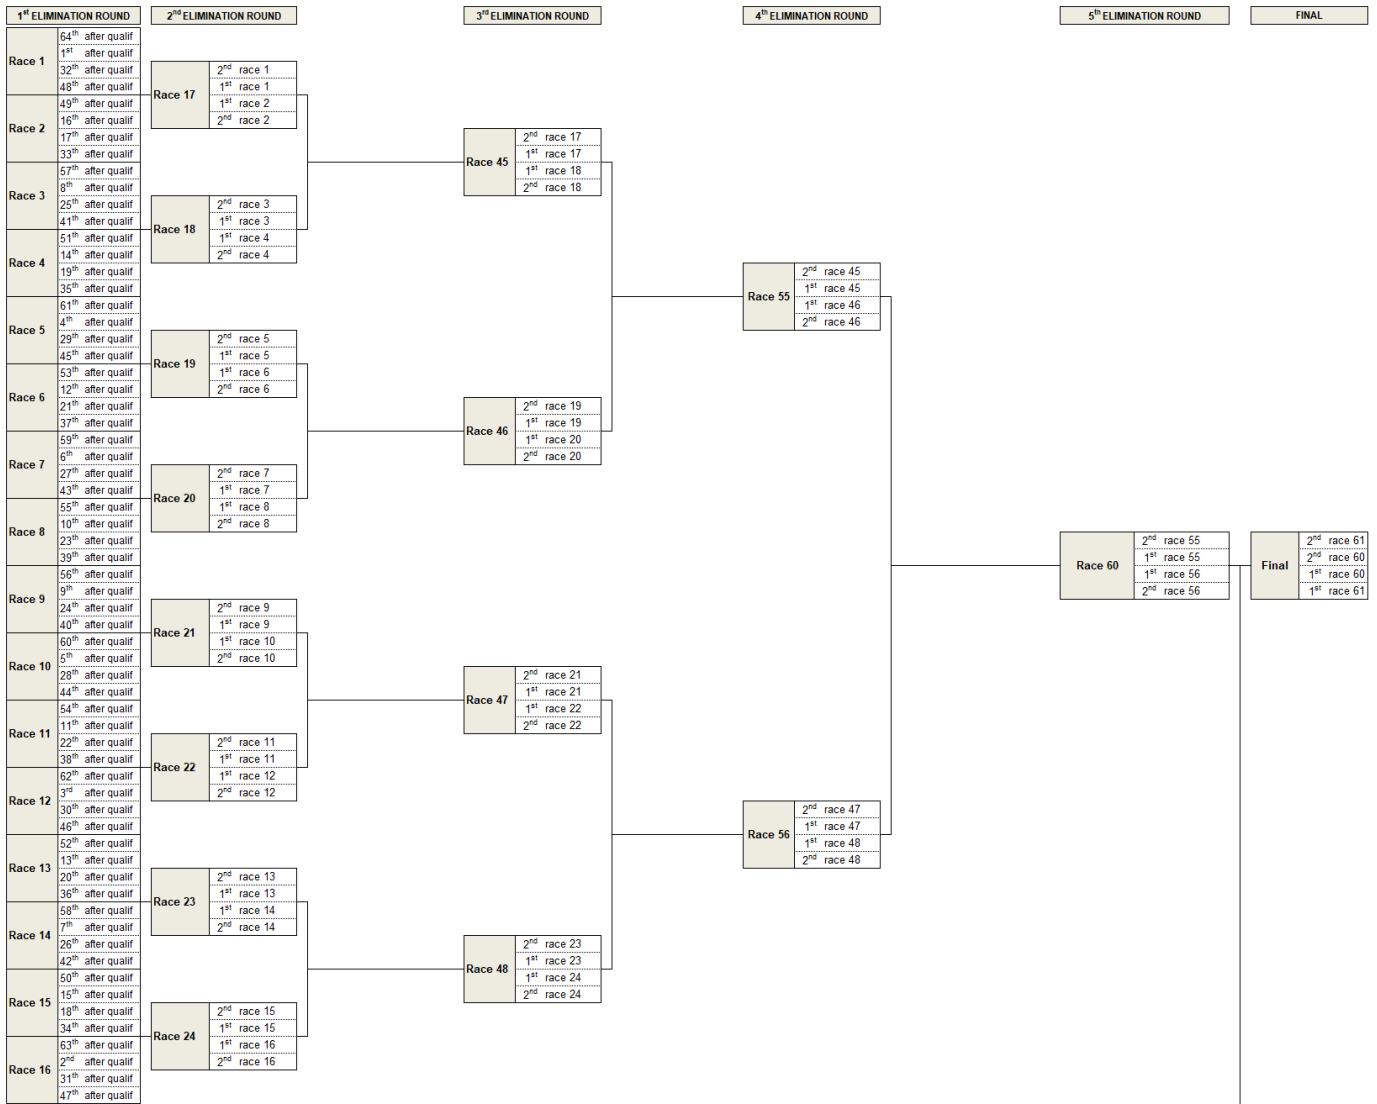

- ANNEX C.2 -**SCENARIO A - 64 competitors selected from qualification stage****1- Composition of the races for the 1st elimination round**

Race 1	Placed 1	Placed 32	Placed 48	Placed 64
Race 2	Placed 16	Placed 17	Placed 33	Placed 49
Race 3	Placed 8	Placed 25	Placed 41	Placed 57
Race 4	Placed 14	Placed 19	Placed 35	Placed 51
Race 5	Placed 4	Placed 29	Placed 45	Placed 61
Race 6	Placed 12	Placed 21	Placed 37	Placed 53
Race 7	Placed 6	Placed 27	Placed 43	Placed 59
Race 8	Placed 10	Placed 23	Placed 39	Placed 55
Race 9	Placed 9	Placed 24	Placed 40	Placed 56
